These clinical protocols have been developed through contributions of numerous clinical experts using funding provided by in part or in whole by Autism Speaks and by institutions cooperating in the Autism Treatment Network, and have been subjected to peer review under the auspices of Autism Speaks and the Autism Treatment Network. The clinical protocols are intended to assist clinical professionals in the application of their professional judgment in the diagnosis of and identification of treatment modalities for autism spectrum disorders. Autism Speaks is not a licensed provider of health care services and these protocols are not a substitute for the treating physician's clinical judgment. Autism Speaks and the Autism Treatment Network have served solely as a funding source for and as the convener of independent clinicians, scientists and researchers who have contributed to the development of these protocols.

Neither Autism Speaks, the Autism Treatment Network, nor any professional contributing to the development of these protocols will have any liability or responsibility for any consequences of the application of these protocols or any action or omission taken in reliance thereon, all of which is hereby waived and released. A clinician by utilizing these protocols assumes all obligations with respect to any disclosures to patients or responsible family members that may be required in connection with the application of these protocols and any and all risk inherent in such utilization.
