

Self-Funded Employer Tool Kit

A tool kit to help families approach their self-funded "ERISA" employers about adding autism benefits to the company health plan

January 2017

Dear Families:

Thank you for requesting this information packet from Autism Speaks. It is our hope that these materials will help you convince your self-funded employer to offer meaningful autism benefits.

The American population receives its health care coverage from a variety of sources. Some people have private health insurance arranged and paid for (perhaps partially) by their employers. Others purchase health insurance on their own in the individual market. As of January 2017, some Americans purchase insurance through "marketplaces" under the Affordable Care Act. Still others are insured through public insurance programs such as Medicaid or Medicare.

Of the Americans whose insurance is provided through their employers, more than half are covered by health benefit plans that are not subject to state regulation. The largest body of non-state-regulated plans are self-insured or self-funded plans, which are plans provided by large employers who choose to pay claims from their own money rather than purchase a typical insurance policy for their employees.

Many consumers do not know whether their employer-provided plan is a traditional insurance plan or a self-funded plan, largely because most insurance cards carried by consumers look essentially the same regardless of whether the coverage is traditional insurance or a self-funded plan. The cards look the same because most self-funded plans are administered by a company called a "third-party administrator," and the third-party administrator is usually a health insurance company, such as Cigna or Aetna. As such, a consumer in a self-funded plan may carry an insurance card that says Aetna, just like a consumer insured directly through Aetna would.

Self-funded plans are governed by federal law rather than state law. The federal law that governs self-funded plans is the Employee Retirement Income Security Act of 1974, commonly known as ERISA. ERISA establishes minimum standards for health, retirement and other welfare benefit plans that are voluntarily established by an employer.

Because it is federal law, ERISA is administered by a federal agency -- the Employee Benefits Security Administration (EBSA), which is part of the U.S. Department of Labor. As such, consumers who have concerns or complaints about benefits offered by a self-funded plan must pursue relief through the Department of Labor, not through their state department of insurance.

States and other local governmental entities also typically self-insure. ERISA does not cover group health plans established by governmental entities, nor does it cover health plans established by churches for their employees, or plans that are maintained solely to comply with applicable workers compensation, unemployment, or disability laws.

One byproduct of self-funding a health plan is that state-mandated benefits are not automatically included in the health plan. Individuals who obtain health coverage through their employer's self-funded plans do not receive the benefit of state laws that require autism benefits. As such, health insurance coverage for individuals with autism will likely never be universal unless Congress passes an autism insurance mandate. In the meantime, individuals in self-funded plans can ask their employers to voluntarily include benefits for autism treatment within their health coverage.

Autism Speaks has helped hundreds of families approach their companies about adding an autism benefit, and we will help you, too. Review the materials in the packet and feel free to draw from the sample letters to customize a letter to your employer. Set up a meeting with your human resources manager, and share the enclosed presentation. And don't hesitate to call the Autism Speaks Government Relations team for assistance. We will gladly participate in a phone conference with you, and sometimes we even physically accompany families to H.R. meetings.

At Autism Speaks, we are committed to helping all families access meaningful health insurance coverage for their children with autism. Please do not hesitate to let us know how we can help you.

With kind regards,

Lorri Shealy Unumb, Esq.

Vice President, State Government Affairs

Loui Shealey Und

Presentation for Self-funded Companies

Self-Funded Health Benefit Plans

Establishing an Autism Benefit

Autism Speaks
State Government Affairs Team

May 2018

Estimated Autism Prevalence 2018

^{*} Centers for Disease Control and Prevention (CDC) prevalence estimates are for 4 years prior to the report date (e.g. 2018 figures are from 2014)

What is Autism?

- Autism is a complex medical condition, brought on through no fault of the family.
- Autism impairs social communication and social interaction;

 and causes restrictive, repetitive patterns of behavior, interests or activities.

"Autism"

- The term "autism" is often used interchangeably with the more accurate term, "autism spectrum disorder" (ASD)
- Across the spectrum, people vary greatly in terms of type and severity of deficits.

 The specific cause(s) of autism is unclear but research suggests it is due to genetic predisposition plus one or more environmental triggers.

Diagnosing Autism

 The American Academy of Pediatrics recommends screening every child for autism at their 18 and 24 month checkups.

 Autism is diagnosed by a medical doctor; usually by a developmental pediatrician, pediatric neurologist or team of developmental specialists.

The DSM

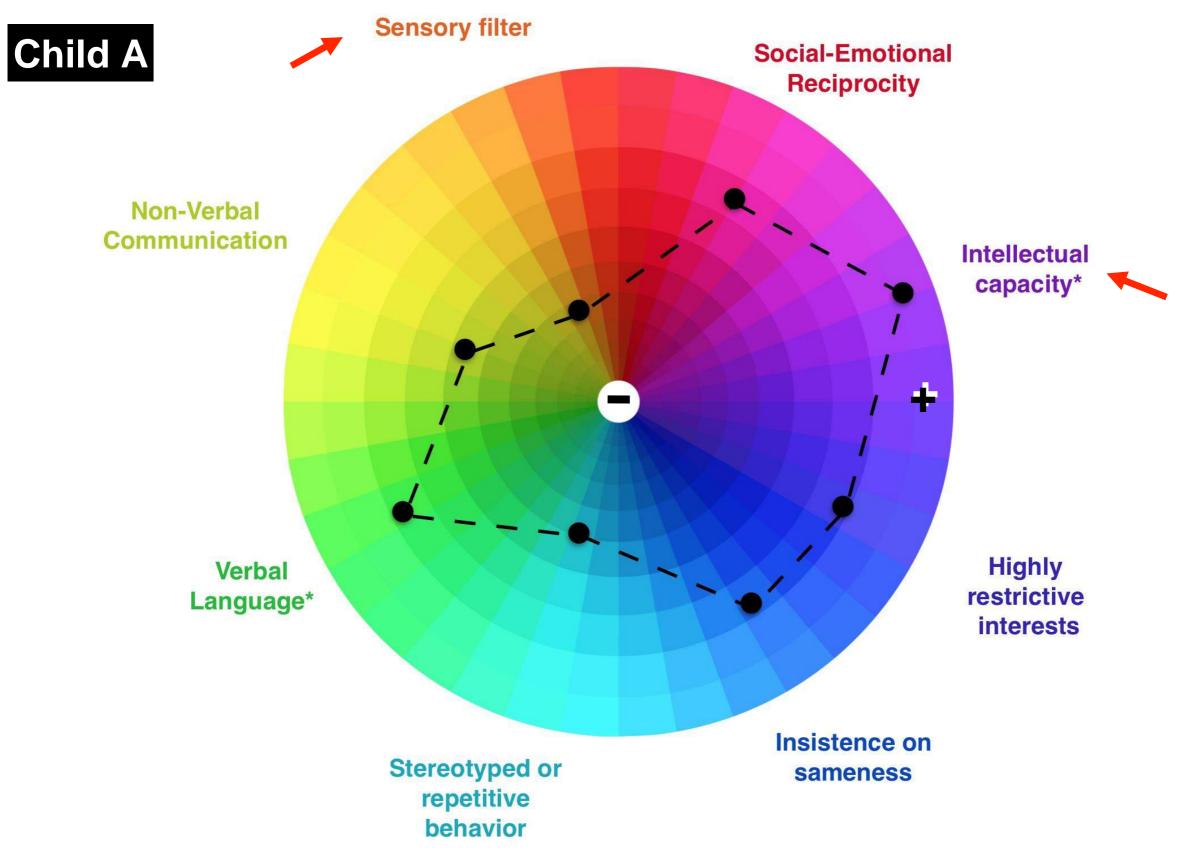

1994; DSM IV ("Pervasive Developmental Disorders")

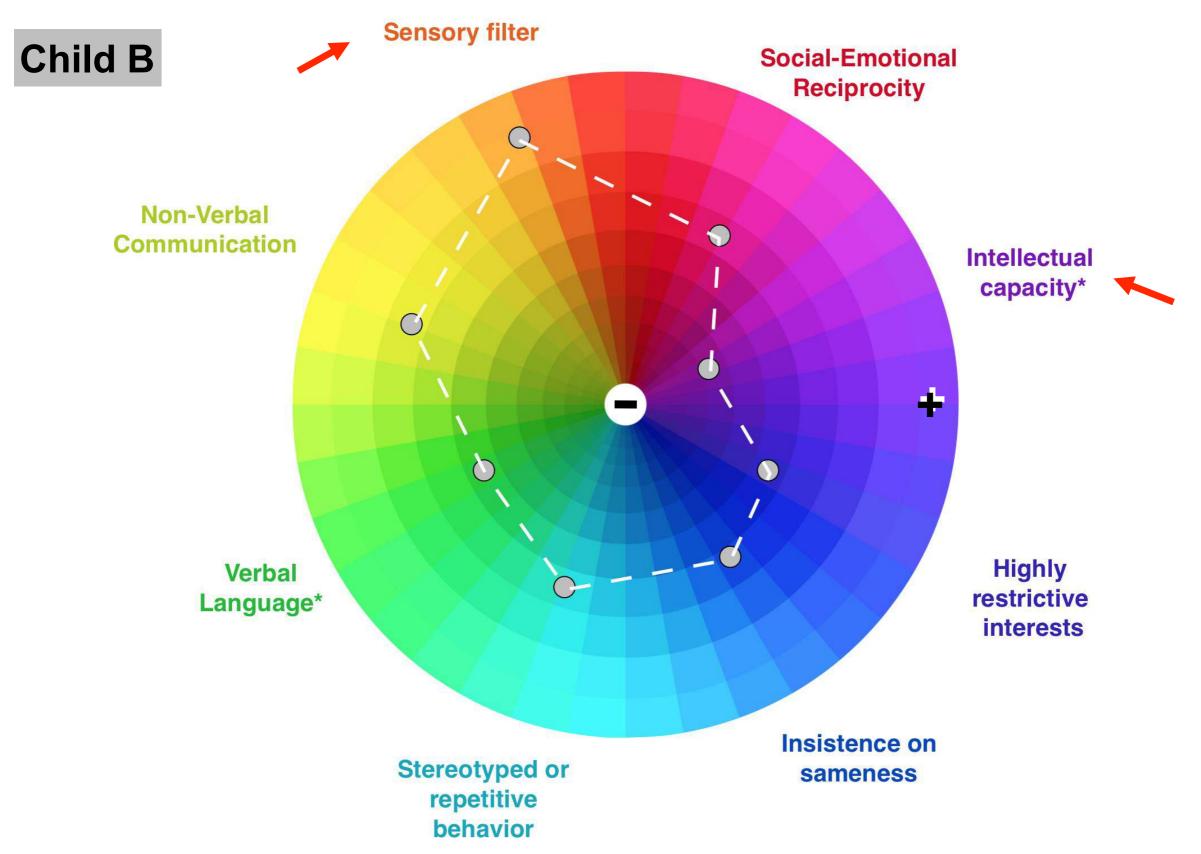

2013; DSM V ("Autism Spectrum Disorder")

Rebecca Burgess

Autism is Treatable

 Although there is no known cure for autism, it can be treated so that the individuals can overcome the disabling aspects of the condition e.g.,

- A non-verbal child can gain acquire language
- Maladaptive behaviors (e.g., self-injury) can be ameliorated.

Treatment

- Early diagnosis and treatment are critical to a positive outcome for individuals with autism spectrum disorder (ASD)
- Treatment is prescribed by a licensed physician or licensed psychologist:

- Applied Behavior Analysis (ABA) Therapy
- Speech, Occupational and Physical Therapy
- Psychological, Psychiatric, and Pharmaceutical Care

Applied Behavior Analysis

- ABA is the most commonly prescribed evidencebased treatment for ASD
- Decades of research demonstrate the effectiveness of ABA therapy for autism (literature review attached)

- Endorsed by leading national health agencies;
 pediatric, neurologic and psychological organizations
- Some insurers still deny coverage for ABA based on the assertion that ABA therapy is "experimental." This assertion is simply not supported by science

What is ABA?

- Behavior analysis is the science that identifies principles of behavior
- Applied behavior analysis (ABA) applies the science of behavior analysis to a clinical setting
- Different techniques of ABA (e.g., discrete trial, verbal behavior, pivotal response)

Common features

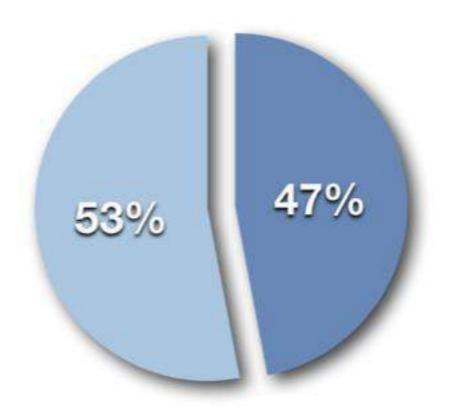

- highly structured
- collect data for target skills or behavior
- provide positive strategies for changing responses or behaviors

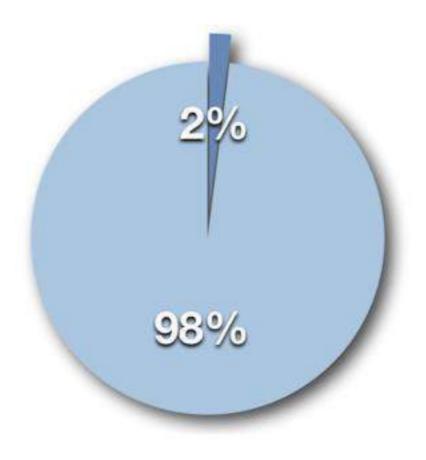

Efficacy of ABA Therapy

Control Group

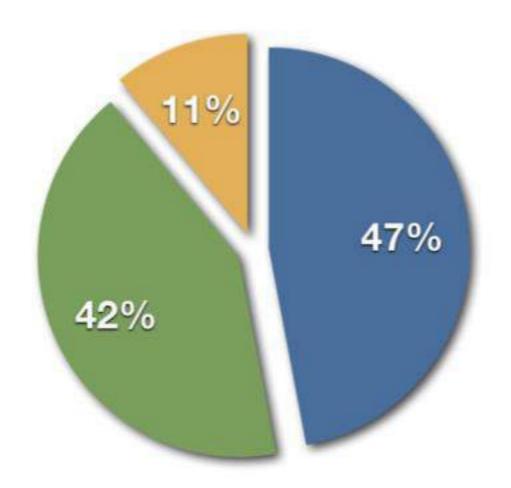

Did Not Achieve Normal IQ

Lovaas, O. I. (1987). Behavioral treatment and normal educational and intellectual functioning in young autistic children. Journal of Consulting and Clinical Psychology, 55, 3-9.

Educational Placement for Group that Received ABA

- Mainstreamed with No Support
- Low-Intensity Special Education Placement (for language delay)
- High-Intensity Special Education Placement (for autism or intellectual disability)

Lovaas, O. I. (1987). Behavioral treatment and normal educational and intellectual functioning in young autistic children. Journal of Consulting and Clinical Psychology, 55, 3-9.

ABA Endorsements

UNITED STATES SURGEON GENERAL (1999)

"Thirty years of research demonstrated the efficacy of applied behavioral methods in reducing inappropriate behavior and in increasing communication, learning, and appropriate social behavior."

PREVENTION (2012)

"A notable treatment approach for people with an ASD is called applied behavior analysis (ABA). ABA has become widely accepted among health care professionals..."

CENTERS FOR MEDICARE AND MEDICAID (2011)

"...controlled trials have shown both the efficacy of programs based in the principles of ABA and that certain individual characteristics (age, IQ, and functional impairments) are associated with positive outcomes."

NATIONAL INSTITUTE OF MENTAL HEALTH (2011)

"One type of a widely accepted treatment is applied behavior analysis (ABA). The goals of ABA are to shape and reinforce new behaviors, such as learning to speak and play, and reduce undesirable ones."

AMERICAN PSYCHOLOGICAL ASSOCIATION PRACTICE ORGANIZATION (2012)

"The field of applied behavior analysis has grown substantially in the past decade, enabling more children with autism and their families to obtain needed services. This growth appears to be related to an increase in the number of children diagnosed with an autism spectrum disorder and to the recognition of the effectiveness of behavior analytic services."

NATIONAL INSTITUTE OF NEUROLOGICAL DISORDERS AND STROKE (2012)

"Therapies and behavioral interventions are designed to remedy specific symptoms and can bring about substantial improvement... Therapists use highly structured and intensive skill-oriented training sessions to help children develop social and language skills, such as Applied Behavioral Analysis"

AMERICAN ACADEMY OF PEDIATRICS (2012)

"An example of a demonstrated, effective treatment for ASD is Applied Behavior Analysis, or ABA. ABA uses behavioral health principles to increase and maintain positive adaptive behavior and reduce negative behaviors or narrow the conditions under which they occur.

Without insurance coverage for ABA

- Parents are forced to pay out-of-pocket to provide their children ABA therapy
- Often financially devastating to families many affected children go without or receive only a fraction of prescribed treatment
- These children often end up in costly special education programs, and eventually become wards of the state.

Cost Savings - long term

- Without appropriate treatment, the lifetime cost to the state has been estimated to be \$3.2 million per child with ASD (Ganz, 2007)
 - special education
 - adult services
 - decreased productivity
- Estimated lifetime cost savings of providing appropriate treatment are \$1 million per child (Jacobsen et al, 1998)

Cost Savings - short term

Children with ASD who achieve a higher level of functioning:

- have lower overall health care costs
- do better in school
- need less assistance from their families

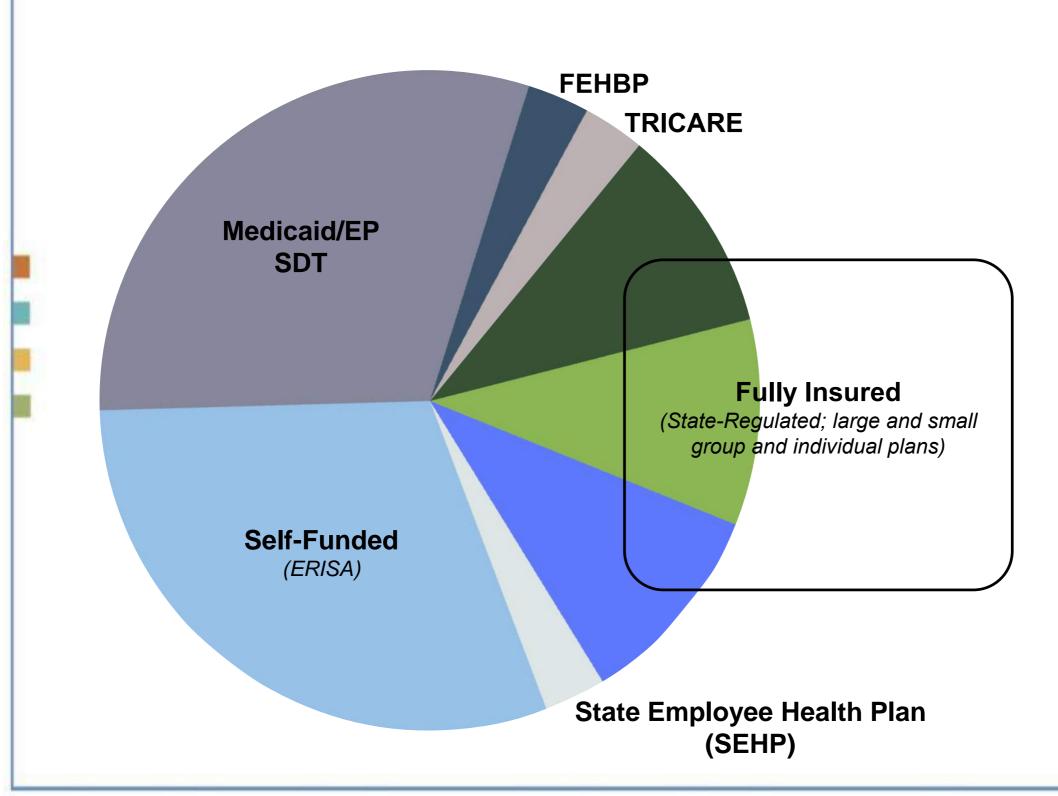

Improved employee productivity due to:

- improved mental health
- decreased absenteeism
- decreased work limitations

Coverage of ABA by Plan Type

Federal Employees (FEHB)

FEHB Program Carrier Letter

U.S. Office of Personnel Management Healthcare and Insurance

Letter No. 2016-03

Date: February 26, 2016

Fee-for-service [3]

Experience-rated HMO [3]

Community-rated HMO [3]

SUBJECT: Federal Employees Health Benefits Program Call Letter

SUBMISSION OF PROPOSALS

This is our annual call for benefit and rate proposals from Federal Employees Health Benefits (FEHB) Program carriers. Your benefit and rate proposals for the contract term beginning January 1, 2015 should be submitted on or before May 31, 2016. Please send your proposals by overnight mail, FAX, or email to your contract specialist. We expect to complete benefit and rate negotiations by mid-August to ensure a timely Open Season. As a reminder, your Contracting Officer will consider responses to the topics in the Call Letter in evaluating your responsiveness to OPM, as it remains an important element of the Plan Performance Assessment program.

FEHB PROGRAM BENEFITS AND INITIATIVES

I. Introduction

The annual call for benefit and rate proposals sets forth the policy goals and initiatives for the FEHB Program for 2017 and beyond. We encourage all carriers to thoroughly evaluate their health plan options to find ways to improve affordability, reduce costs, and improve the quality of care and the health of the enrolled population. Except where noted, benefit enhancements must be offset by proposed reductions so that premiums are not increased due to benefit changes. OPM will make exceptions to this requirement for benefit changes in response to the Medicare and Applied Behavior Analysis (ABA) initiatives described below. This year, we are focusing on the following areas:

- limiting cost growth;
- managing prescription drugs;
- · ensuring access to care;
- coordinating benefits for the Medicare population;
- · implementing plan performance assessment; and
- · continuing to implement Self Plus One coverage.

Specific initiatives are discussed below

"OPM has encouraged FEHB plans to offer ABA benefits for children with autism spectrum disorders since 2013. We have also emphasized the growing number of providers and research linking behavioral interventions with positive outcomes"

While prioritizing limiting cost growth and ensuring access to care...

"OPM has now determined that appropriate coverage of ABA treatment by all plans/options is necessary for the efficient and effective operation of FEHB's individual choice insurance model. Therefore, for the 2017 plan year, carriers may no longer exclude ABA for the treatment of Autism Spectrum Disorder (ASD)."

CMCS Informational Bulletin

DATE: July 7, 2014

FROM: Cindy Mann, Director

Center for Medicaid and CHIP Services

SUBJECT: Clarification of Medicaid Coverage of Services to Children with Autism

In response to increased interest and activity with respect to services available to children with autism spectrum disorder (ASD), CMS is providing information on approaches available under the federal Medicaid program for providing services to eligible individuals with ASD.

Background

Autism spectrum disorder is a developmental disability that can cause significant social, communication and behavioral challenges. A diagnosis of ASD now includes several conditions that used to be diagnosed separately: autistic disorder, pervasive developmental disorder not otherwise specified (PDD-NOS), and Asperger syndrome. These conditions are now all called autism spectrum disorder. Currently, the Center for Disease Control and Prevention (CDC) estimates that approximately 1 in 68 children has been identified with ASD. ¹

Treatments for children with ASD can improve physical and mental development. Generally these treatments can be categorized in four categories: 1) behavioral and communication approaches; 2) dietary approaches; 3) medications; and 4) complementary and alternative medicine. ² While much of the current national discussion focuses on one particular treatment modality called Applied Behavioral Analysis (ABA), there are other recognized and emerging treatment modalities for children with ASD, including those described in the ASD Services, Final Report on Environmental Scan (see link below)³. This bulletin provides information related to services available to individuals with ASD through the federal Medicaid program.

The federal Medicaid program may reimburse for services to address ASD through a variety of authorities. Services can be reimbursed through section 1905(a) of the Social Security Act (the Act), section 1915(i) state plan Home and Community-Based Services, section 1915(c) Home

 States cannot cannot categorically deny ABA services to children regardless of medical need

"... a state seeking to deny ABA services to a specific child with ASD to correct or ameliorate their condition must demonstrate the availability of, and approve payment for, alternative services that will be equally effective in meeting the child's needs."

Self Funded Plans and UnitedHealthcare

 "UnitedHealthcare recommends that selffunded plans that currently exclude ABA consider removing that exclusion at next renewal."

"Self-funded plans that do not expressly exclude benefit coverage for ABA and wish to continue excluding Applied Behavioral Analysis, must now modify their plans to expressly exclude it."

- June 17, 2016

Why Employers Should Implement an Autism Benefit

- 1. Cost savings
- 2. Improved employee productivity
- 3. Employee retention
- 4. Improved company public image
- 5. Competitive benefits package
- 6. "It's the right thing to do." DTE Energy

"[N]o disability claims more parental time and energy than autism."

- **New York Times**, 12/20/04

"There are powerful economic and social arguments for providing this benefit. We know that if families have coverage for their children they will be better employees."

- Ron Ashworth, Board Chair, Sisters of Mercy Health Systems

Employee Retention

"It meant so much to them that Microsoft cared about their employees, cared about their children, cared about their welfare, that Microsoft, as a company, was willing to do this. It made them feel really proud of their company.

That's not the kind of company you leave." -

Eric Brechner, Microsoft employee

(In an interview summarizing results of an employee survey relating to Microsoft's health benefits plan)

What Should an Autism Benefit Look Like?

- Coverage should include
 - Applied Behavior Analysis (ABA) Therapy
 - Speech Therapy, Occupational Therapy, and Physical Therapy

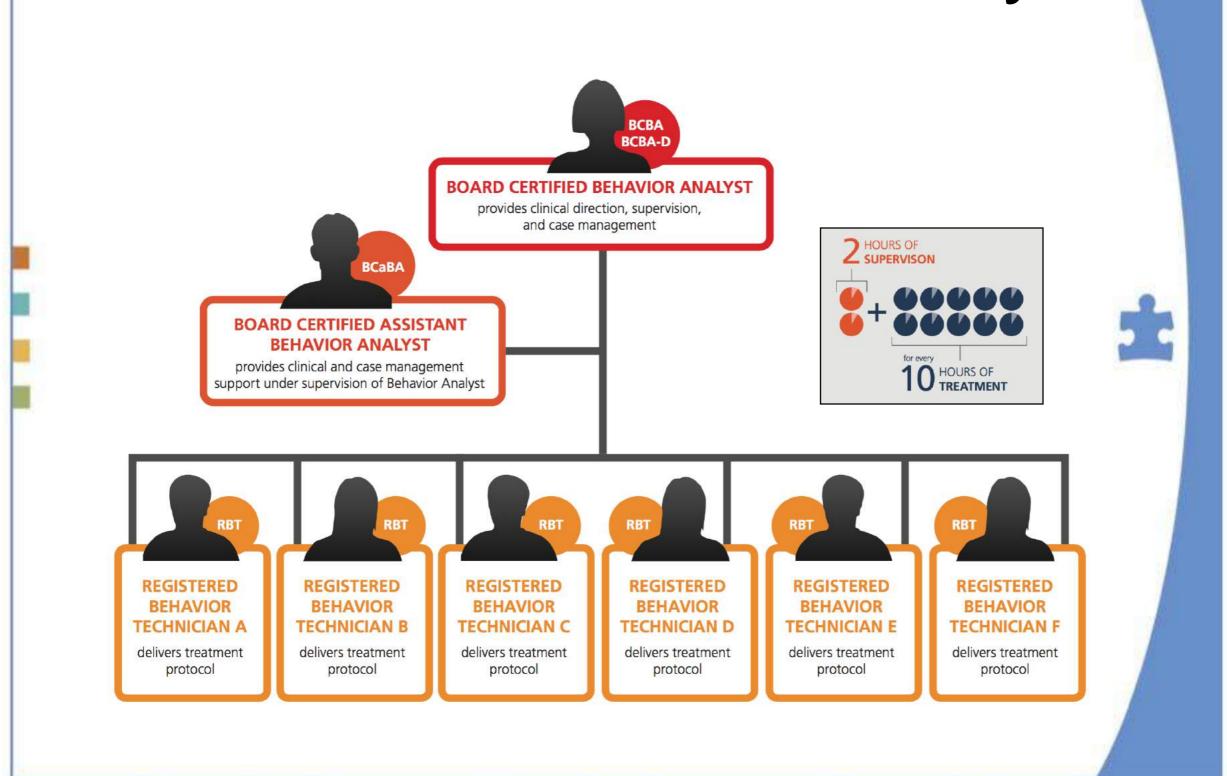

- Psychological, Psychiatric, and Pharmaceutical Care
- Diagnosis and Assessments
- No age, dollar or visit limits

What Should an Autism Benefit Look Like?

- For Applied Behavior Analysis, treatment must be provided <u>or supervised</u> by:
 - a behavior analyst who is certified by the Behavior Analyst Certification Board[®], or
 - a licensed psychologist so long as the services performed are commensurate with the psychologist's formal university training and supervised experience

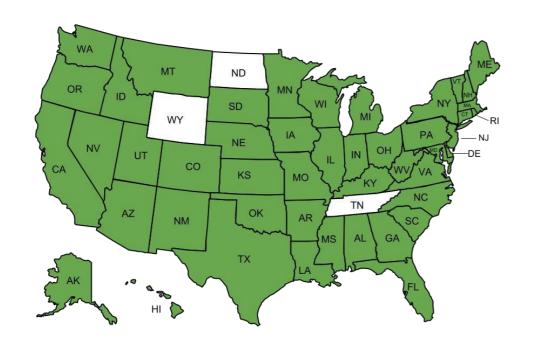

Tiered Service Delivery

What is the cost of autism insurance reform?

Sources of Claims Data

47 states

Data not available from all

- difficult to obtain
- some laws enacted recently

- State Employee Health
 Plan Administrators
- State Departments of Insurance

- Offices of StateTreasurer
- State-commissioned Reports

Terms and Calculations

- "total claims paid" the total allowed cost of the claims less any patient copays, deductibles and co-insurance, i.e. the net cost to the plan
- "total covered lives" the total number of members (not employees) covered under the plan

- "number utilizing coverage" the number of members for whom an autism-related claim was filed
- cost "per member per month" (PMPM)
 total claims paid ÷ total covered lives ÷ the number of months over which claims were collected

The Cost of Autism Insurance Reform Year 1

9 states	Number of Covered Lives	Number utilizing coverage	Total Claims	PMPM cost
Arizona	130,000	257	\$473,818	\$0.30
Arkansas	145,000	NA	\$126,240	\$0.07
Florida	382,083	372	\$390,724	\$0.09

Ohio	110,000	118	\$269,193	\$0.20
West Virginia	210,000	241	\$452,250	\$0.18
AVERAGE				\$0.17

^{*}Compass Health Analytics (2013) - as part of a comprehensive review of all state mandated health insurance benefits

cost includes all covered services i.e., ABA plus other treatments

The Cost of Autism Insurance Reform Year 2

6 states	Number of Covered Lives	Number utilizing coverage	Total Claims	PMPM cost
Arizona	130,000	187	\$388,662	\$0.25
Florida	386,203	511	\$1,748,849	\$0.38
Illinois	170,790	NA	\$197,290	\$0.10
Kansas	99,465	126	\$309,216	\$0.26
Louisiana	149,477	NA	\$722,828	\$0.40
Missouri	1,429,153	2,508	\$6,555,602	\$0.38
AVERAGE				\$0.30

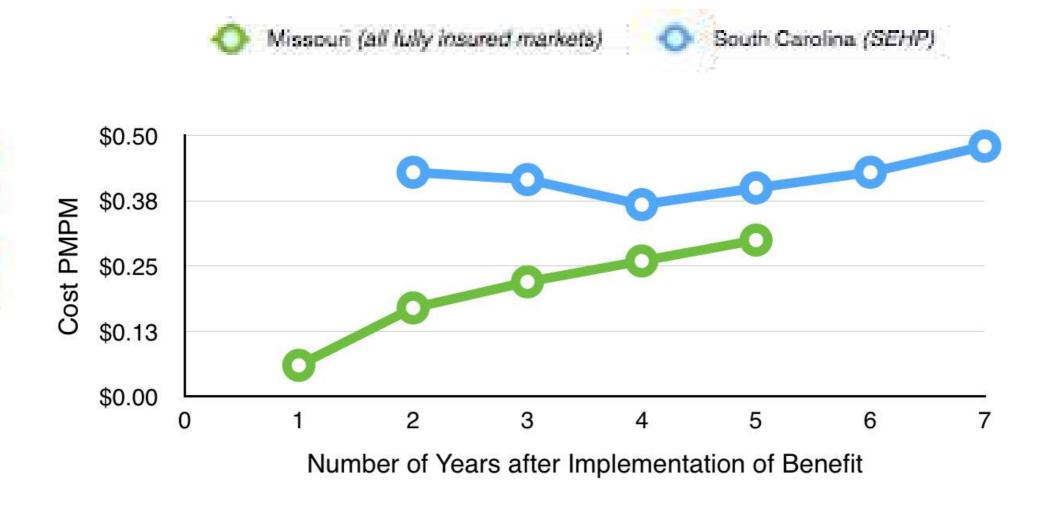

cost includes all covered services i.e., ABA plus other treatments

The Cost of Autism Insurance Reform Year 3

3 states	Number of Covered Lives	Number utilizing coverage	Total Claims	PMPM cost
Arizona	128,000	295	\$390,690	\$0.25
Kansas	99,465	129	\$326,907	\$0.27
Missouri	1,443,680	3,070	\$8,289,917	\$0.48
AVERAGE				\$0.33

cost includes all covered services i.e., ABA plus other treatments

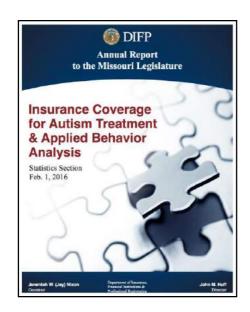

Cost of Covering ABA

Missouri

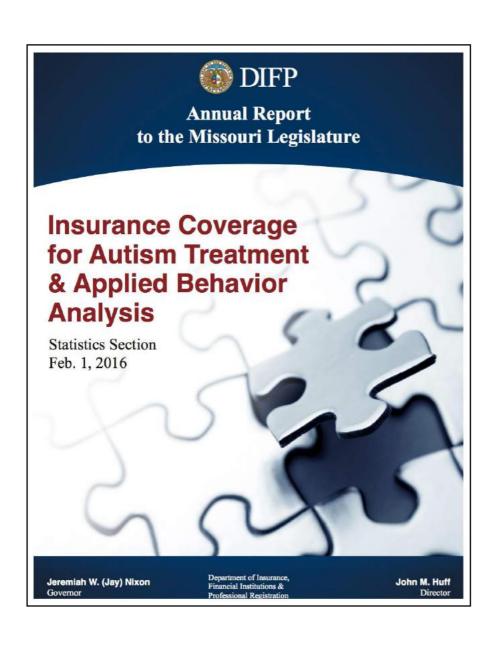

- Autism mandate implemented Jan 2011
- Terms
- \$40,000/yr (cap only applies to ABA)*
 - until age 18*
 - effectively an unlimited benefit
- DIFP required to report claims costs annually

^{*} Increases annually for inflation; Caps can be exceeded if deemed medically necessary

Source: Missouri Department of Insurance, Financial Institutions and Professional Registration (2016)

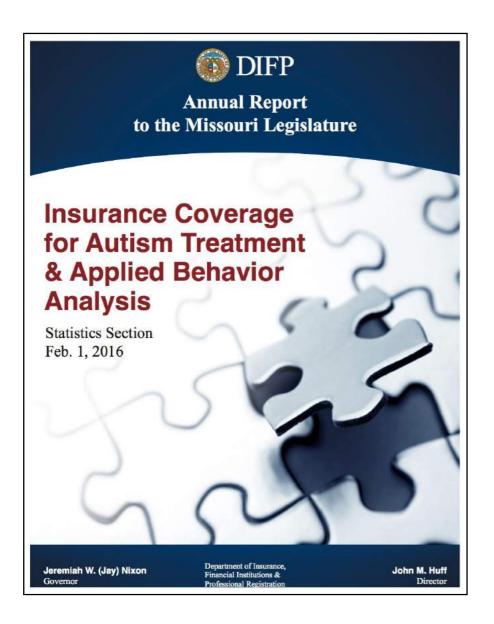

Cost of ABA only

- Average monthly cost of ABA per individual with ASD = \$161
- \$0.30 PMPM
- 0.12% of total claims incurred

2016 report on 2015 claims data

Effect on Premiums

- Claims incurred for <u>all</u>
 treatment of ASD represent
 0.25% of total claims
- "While costs associated with autism-related treatment have risen during the years since the mandate was enacted, the fact that these costs represent just over two-tenths of one percent of overall claim costs makes it very unlikely that they will have any appreciable impact on insurance premiums."

Missouri Department of Insurance, Financial Institutions and Professional Registration (2016)

Projected vs Actual Costs of ABA

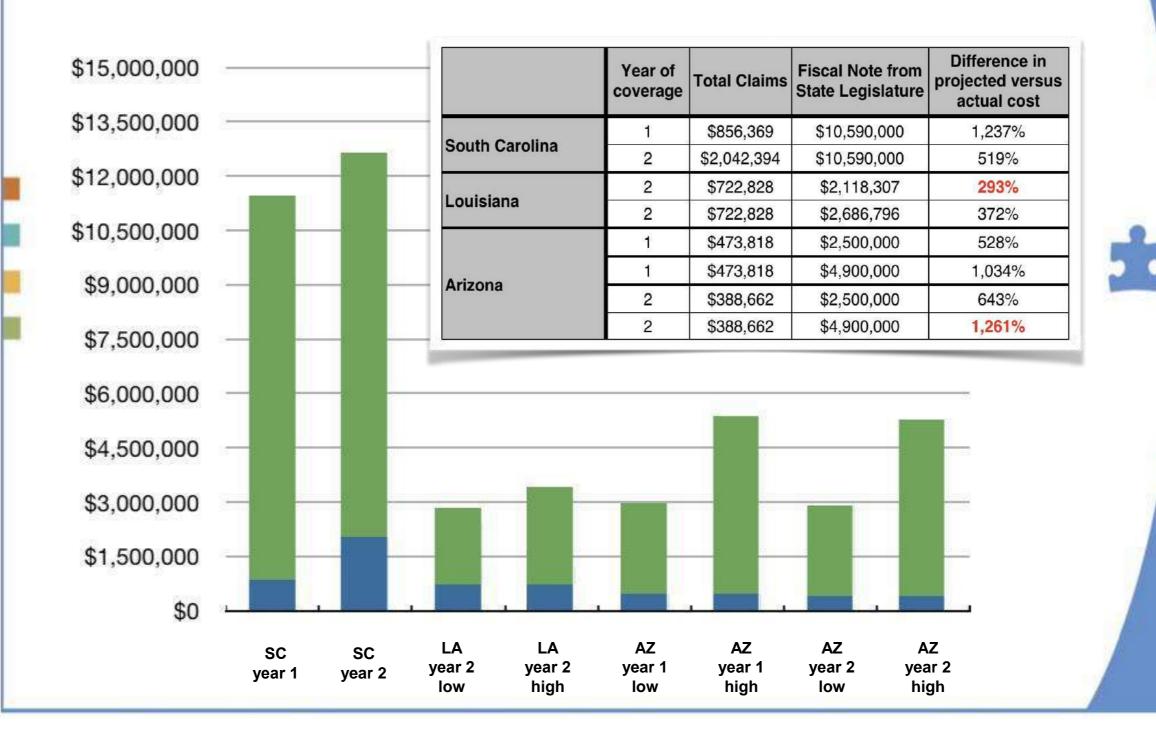

"If the out-of-pocket cost of ABA can be as high as \$60,000 or more per child per year, how can the actual claims data be so low?"

Projected vs Actual Costs

Important Considerations

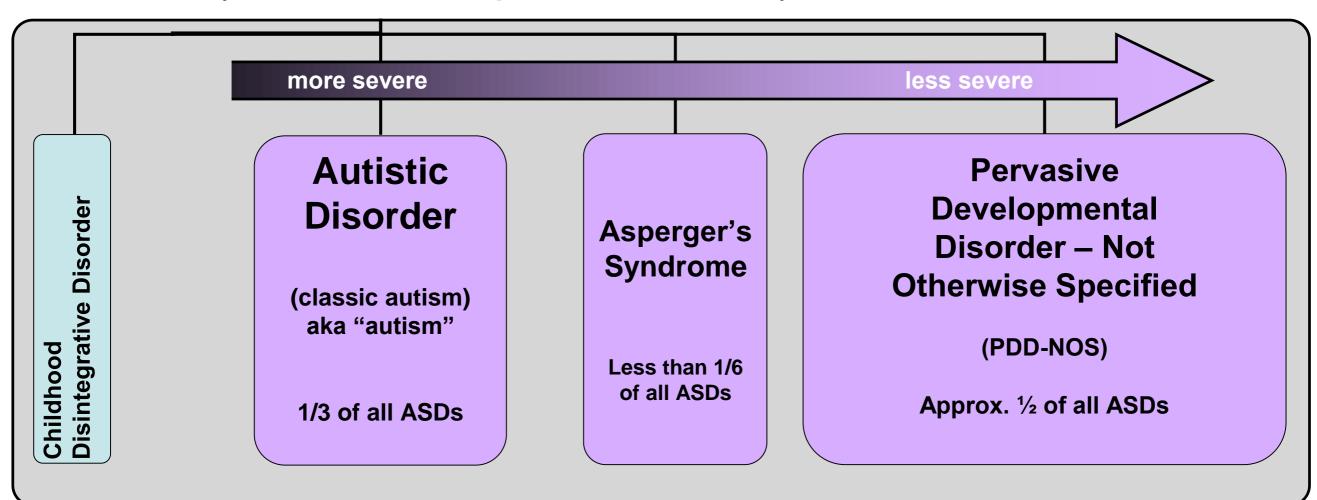

- Autism is a spectrum disorder treatment is individualized based on the severity and individual needs of the affected individual.
- "Comprehensive" versus "focused" ABA
 - Comprehensive programs are not prescribed indefinitely (avg. 3-5 years)

- Focused ABA is intermittent and prescribed "as needed"
- Utilization of benefits is not 100%
- Tiered service delivery model

Only the most severely affected individuals will be prescribed the most intense treatment protocols

1994; DSM IV ("Pervasive Developmental Disorders")

2013; DSM V ("Autism Spectrum Disorder")

Level 3	Level 2	Level 1
		,

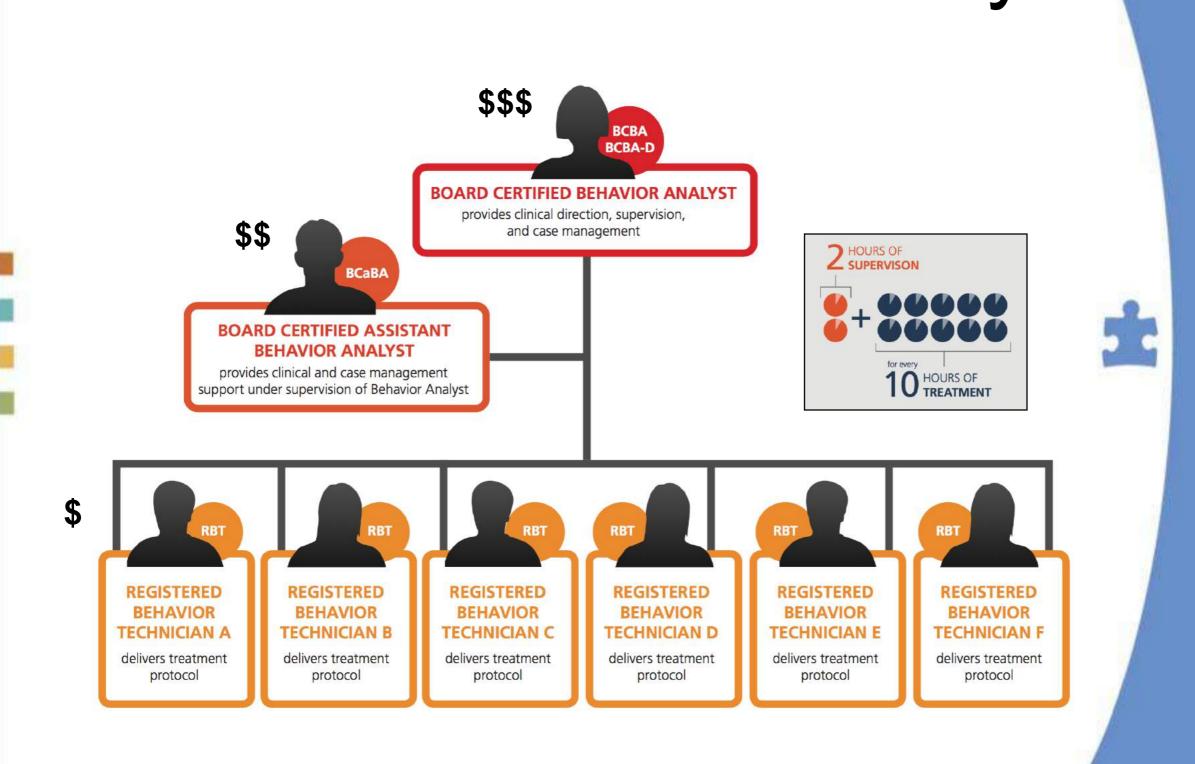

Utilization

- Disease Prevalence # Treated Prevalence
 - Prevalence of Autism = 1.5% (1:68)
 - Treated Prevalence of Autism*
 - 0.16% (1:625) in states <u>without</u> ASD insurance mandates
 - 0.18% (1:556) in states with ASD insurance mandates
 - 9x less than disease prevalence
- Why is treated prevalence so much less than disease prevalence?
 - undiagnosed individuals
 - parent choice
 - higher functioning
 - socioeconomic status
 - publicly funded programs

^{*} Mandell DS, Barry CL, Marcus SC, Xie M, Shea K, Mullan K, Epstein AJ. Effects of Autism Spectrum Disorder Insurance Mandates on the Treated Prevalence of Autism Spectrum Disorder. *JAMA Pediatr.* 2016;170(9):887-893. doi:10.1001/jamapediatrics.2016.1049

ABOUT AUTISM

Autism, or autism spectrum disorder, refers to a broad range of conditions characterized by challenges with social skills, repetitive behaviors, speech and nonverbal communication, as well as by unique strengths and differences. We now know that there is not one autism but many subtypes, most caused by a combination of genetic and environmental influences. An estimated 1 in 68 children is on the autism spectrum.

ABOUT AUTISM SPEAKS

Autism Speaks is dedicated to promoting solutions, across the spectrum and throughout the life span, for the needs of individuals with autism and their families. We do this through advocacy and support; increasing understanding and acceptance of autism spectrum disorder; and advancing research into causes and better interventions for autism spectrum disorder and related conditions. We empower people with autism and their families with resources, online tools and information covering the life span. To find resources, join a fundraising walk or make a donation, go to www.AutismSpeaks.org.

Sample Letters

Director of Benefits Princeton University Princeton, NJ 08544

Dear Ms. Nelson:

I write to request that Princeton University amend its self-funded health plan. Specifically, I request that Princeton implement autism benefits, including coverage for Applied Behavior Analysis (ABA), commensurate with the New Jersey autism insurance reform law passed on August 13, 2009.

Because autism is a severe, chronic developmental disorder, which results in significant lifelong disability, the goal of treatment is to promote the child's social and language development and minimize behaviors that interfere with the child's functioning and learning. Applied Behavior Analysis, or ABA, is a method of teaching children with autism. It is based on the premise that appropriate behavior — including speech, academics and life skills — can be taught using scientific principles. ABA assumes that children are more likely to repeat behaviors or responses that are rewarded (or "reinforced"), and they are less likely to continue behaviors that are not rewarded. Eventually, the reinforcement is reduced so that the child can learn without constant rewards.

ABA is considered by many researchers and clinicians to be the most effective evidence-based therapeutic approach demonstrated thus far for children with autism. Several landmark studies have shown that about 50% of children with autism who were treated with the ABA approach before the age of four had significant increases in IQ, verbal ability, and/or social functioning. Even those who did not show these dramatic improvements had significantly better improvement than matched children in the control groups. In addition, some children who received ABA therapy were eventually able to attend classes with their peers.²

The efficacy of ABA has been widely endorsed by medical and governmental authorities. The U.S. Surgeon General states: "Thirty years of research demonstrated the efficacy of applied behavioral methods in reducing inappropriate behavior and in increasing communication, learning, and appropriate social behavior." The National Institute of Mental Health echoes this conclusion: "Among the many methods available for treatment and education of people with autism, applied behavior analysis (ABA)

U.S. Department of Health and Human Services, Substance Abuse and Mental Health Services Administration, Center for Mental Health Services, National Institutes of Health, National Institute of Mental Health. Rockville, MD.

has become widely accepted as an effective treatment." In 2007 the American Academy of Pediatrics reported, "The effectiveness of ABA-based intervention in ASDs has been well documented through 5 decades of research by using single-subject methodology and in controlled studies of comprehensive early intensive behavioral intervention programs in university and community settings. Children who receive early intensive behavioral treatment have been shown to make substantial, sustained gains in IQ, language, academic performance, and adaptive behavior as well as some measures of social behavior, and their outcomes have been significantly better than those of children in control groups."

In the past, insurers have denied coverage for ABA on the basis that it is "experimental." But this claim is simply not supported by science, as evidenced by the research cited above. Recognition of the efficacy of ABA for improving the quality of life for children with autism has led states across the country to mandate state-based health insurers to cover evidence-based medically necessary autism therapies, such as ABA. Twenty-one states have now passed autism mandates. Twelve more states are currently considering them. On August 13, 2009 New Jersey became the fifteenth state to implement this reform, as Governor Jon Corzine signed the autism insurance reform bill, S. 1651/A. 2238, into law. The New Jersey bill requires insurers to cover up to \$36,000 annually for a child with autism that is 21 years of age or younger. Coverage includes ABA therapy.

Although this law is not enforceable on self-funded health plans, such as Princeton's, many companies and institutions are choosing to voluntarily comply with the provisions of state-based autism insurance reform. Companies such as Microsoft, Home Depot, Deloitte, Time Warner, Haliburton, and institutions of higher education such as Ohio State University and the University of Minnesota, have opted to provide coverage for autism therapies within their own self-funded health plans.

In fact, it may be only a matter of time before self-funded health plans are mandated to cover ABA and related treatments. The "Autism Treatment Acceleration Act of 2009" (ATAA), currently being considered by Congress, provides for federal reform of autism insurance coverage. If passed, the ATAA will require all insurance companies across the country to provide coverage for evidence-based, medically-necessary autism treatments and therapies. If passed, this federal bill will supersede all state laws and become the "floor" requirement for all insurance companies, including fully-funded and self-funded individual and group health plans.

Princeton should cover ABA for employee dependents with autism as part of its mission to be a family-friendly employer. According to the Princeton University Human Resources website: "Princeton University cares deeply about providing a campus environment and a range of programs that assist faculty and staff in achieving an appropriate balance among work, personal and family commitments." From stopping the tenure-clock, to subsidizing backup childcare to generous leave policies for new parents, Princeton strives to be a family-friendly place and advertises itself as such.

Beyond its place in Princeton's mission, implementing autism benefits makes good financial sense for the University and for society. It behooves the University to help employees provide treatment for their autistic children. Employees whose autistic children can benefit from ABA will be more productive. Employee retention is maximized as faculty and staff will not feel the need to leave Princeton in search of

⁵ Scott M. Myers, MD, Chris Plauche' Johnson, MD, MEd, the Council on Children With Disabilities. 2007. "Clinical Report: Management of Children with Autism Spectrum Disorders." *American Academy of Pediatrics*, 1164.

⁶ http://www.princeton.edu/hr/benefits/worklife/

a job with state-regulated insurance. Autistic children who are helped by ABA to achieve higher levels of functioning have lower overall health costs and need less assistance from their families. Successful early intervention for children with autism significantly reduces the future burden on taxpayers. A Pennsylvania study of private insurance coverage for autism therapies projected an actual cost savings to that state of over a million dollars per child.⁷

Princeton University itself has a history of supporting the autism community generally and ABA programs specifically. This summer, the Woodrow Wilson School is holding a Junior Summer Institute on autism and domestic public policy. One of the speakers at this workshop is Lorri Unumb, Senior Policy Advisor and Legal Counsel to Autism Speaks, who will be promoting autism treatment coverage through health insurance. One of Princeton's Community Based Learning Initiatives places Princeton students at Eden Institute, Inc., one of the premier ABA service providers in New Jersey. Indeed, Andy Armstrong, Director of Grants and Stewardship at Eden Autism Services Foundation, praises the long history of mutually beneficial collaboration between Eden and the University. University faculty and students maintain important connections with Eden: faculty members take classes there, students volunteer there, and student groups hold an annual fashion show fundraiser on Eden's behalf.

For all of these reasons, I urge Princeton University to voluntarily implement autism benefits in its self-funded health plan. ABA is supported by science. It is well regarded in the medical community. Funding autism therapies, including ABA, is in accordance with Princeton's family-friendly mission and its history of supporting the autism community. It is the right thing to do for the university, its employees, and the greater community.

Lorri Unumb of Autism Speaks has helped other institutions implement autism benefits in their self-funded health plans. She stands ready to help Princeton University take this step and can be contacted at lorri.unumb@autismspeaks.org.

On behalf of my son and all the other children of Princeton employees who are fighting against the limitations of autism every day, I thank you for considering this most urgent request.

Sincerely,

[■] John W. Jacobson, James A. Mulick, Gina Green, Cost-Benefit Estimates for Early Intensive Behavioral Intervention for Young Children with Autism – General Model and Single State Case. 13 Behavioral Interventions, 201-26 (1998).

RE: Ryan's Law

Benefits for children with Autism

July 1, 2008

To (HR President),

My name is . I am a Physician Practice Specialist at the Medical Campus. I enjoy serving the community in my position and helping patients and their families experience the Planetree vision that the Greenville Hospital System supports. As their first contact, I strive to make every patient's emotional, physical, and financial concerns my top priority. Every evening I come in to work, I remember that this is my primary goal.

My day job is raising my two children. is 5 ½ years old and is 3 ½. I love that job too! There are many similarities in nurturing their development to the ideals brought forth in the Planetree vision. I strive to make my children's emotional, physical, and financial concerns a priority. This has become increasingly difficult as we try to pay for my son's treatments for Autism.

A recent report by the federal Centers for Disease Control and Prevention shows that as many as one child in 120 is now diagnosed with an autism-type disorder. While doctors have been unable to explain the reasons behind this startling increase, research on how best to treat and teach autistic children has confirmed the value of an early intervention program that relies on intensive behavioral therapy. More than 500 medical studies published in the last two decades and the Surgeon General support the behavioral techniques, focused on teaching everything from language and academics, to basic life skills, help substantial numbers of preschool-age children with autism achieve intellectual, academic, communication, and social skills that approach normal range. (SmartMoney magazine, "Families Changed Microsoft's View of Autism," May 8,2007)

The cost of Intensive Behavioral Therapy can be up to \$50,000 per year. In comparison to other childhood diseases and their prevalence, the following chart shows the lack of funding for treatment of autism:

Childhood Disease	Prevalence	Private Funding
Leukemia	1 in 25,000	\$310 million
Muscular Dystrophy	1 in 20,000	\$175 million
Pediatric AIDS	1 in 8,000	\$394 million
Juvenile Diabetes	1 in 500	\$130 million
Autism	1 in 150	\$15 million

www.autismspeaks.org

To help the lack of funding, the State of South Carolina unanimously passed a law (Ryan's Law) requiring insurance companies to recognize autism therapies, including those using behavioral training techniques, and to pay for such autism therapies consistent with the insurance coverages otherwise being offered for other physical illnesses under a heath insurance plan. That law goes into effect on July 1, 2008.

The recently passed Ryan's Law does not apply to self-funded insurance entities, which is the purpose in writing this letter to you. I have talked to representatives at CIGNA Healthcare and they informed me that it is up to my employer to decide whether they would like to follow Ryan's Law and give coverage to their employees with autistic children.

As one of your employees, I am hoping you will consider this proposal as a means of supporting your employees and providing partial relief to the financial burdens associated with raising an autistic child. My hope for my son is to help him develop and grow into an independent adult so that we will never have to put him in an institution. We love him so much and our hearts ache as we watch him struggle to speak and learn how to engage with others. We have seen the benefits of ABA Therapy and would love to be able to give our son the therapy he needs to progress towards being a typical child, the best he can.

A copy of Ryan's Law is attached to this letter for your review.

I look forward to talking to you,

June 10, 2011

Tom Georgens Chief Executive Officer NetApp, Inc. 495 East Java Drive Sunnyvale, CA 94089

Dear Mr. Georgens:

We are writing on behalf of several of your employees in response to a recent letter from Cigna Healthcare about pending changes to NetApp's coverage of autism treatments. By way of background, Autism Speaks, which is North America's largest autism science and advocacy organization, has successfully advocated across the country for insurance reform to cover behavioral treatments for autism. Several months ago, Autism Speaks assembled a workgroup to examine issues relating to insurance coverage for autism treatments among self-insured plans. The members of our workgroup have varied backgrounds, but most of us have family members with autism, and we have begun working together to help families obtain critically-needed treatments for their loved ones affected by this disease.

We applaud the leadership that NetApp demonstrated when it established an autism benefit for its employees in 2006. NetApp was on the leading edge of an emerging trend where today a majority of states across the country have laws requiring state-regulated health insurers to cover evidence-based autism therapies, such as Applied Behavior Analysis, or ABA.

Because autism is a severe, chronic neurological disorder, which can result in significant lifelong disability, the goal of treatment is to promote the child's social and language development and minimize behaviors that interfere with the child's functioning and learning. ABA is a method of treating children with autism. It is considered by many researchers and clinicians to be the most effective evidence-based therapeutic approach demonstrated thus far for children with autism. ¹

- The efficacy of ABA has been widely endorsed by medical and governmental authorities including the U.S. Surgeon General, the National Institute of Mental Health, and the American Academy of Pediatrics (AAP).
- The AAP noted that "The effectiveness of ABA-based intervention in ASDs has been well documented through 5 decades of research Children who receive early intensive behavioral treatment have been shown to make substantial, sustained gains in IQ, language,

_

¹ Simpson, R. L. 1999. "Early Intervention with Children with Autism: The Search for Best Practices." *Journal of the Association for Persons with Severe Handicaps* 24(3): 218-221.

- academic performance, and adaptive behavior as well as some measures of social behavior, and their outcomes have been significantly better than those of children in control groups."²
- Reflecting this consensus in the medical community, Independent Medical Review (IMR) panels in California, which review Experimental/Investigational and Medical Necessity appeals, have overturned health plan and insurer denials of ABA 90% (53/59) of the time since 2008.³
- This trend in decisions has prompted the California Department of Insurance (CDI) to issue a notice of enforcement of IMR statutes which flags that "insurers' denials of behavioral therapy such as Applied Behavioral Analysis have been overturned in IMR." The CDI further notes that some of "the insurers' denials based on a contention that the therapy was experimental or investigational were overturned because such treatment is now recognized as the standard of care for autism." CIGNA's denials of ABA on this basis have been overturned by the CDI on at least two separate occasions.⁴
- More than half of the states have passed insurance reform requiring coverage of applied behavior analysis, and 21 more states are pursuing such legislation because ABA is widely recognized as the standard of care for autism.
- While CDI does not regulate NetApp's policy, CDI's statement and the CIGNA IMR overturns suggests CIGNA's contention that ABA is experimental, which NetApp appears to be relying on, is out of date.

It was therefore surprising to learn that you would be "removing coverage for early intervention therapies, such as ABA, as they are still considered experimental." This is not supported by the decades of research that have established substantial evidence of efficacy as noted above. For employees whose children are affected by autism, the proposed policy, which includes speech, occupational, and physical therapy, but excludes ABA, is like having coverage for treatment of cancer that excludes chemotherapy.

Beyond its place in your mission to create a healthy work environment that fosters the collaboration and creativity for which you are known, covering early intervention and ABA makes good financial sense for NetApp and for society. Employee productivity is maximized when children receive ABA and thereby achieve higher levels of functioning, have lower overall health costs, and need less assistance from their families. Recruitment and retention is helped, as people will not feel the need to leave in search of a job that provides comprehensive coverage. Considering the significant increase in autism incidence, chances are at some point you are likely to lose out on a desired candidate because you won't provide an autism benefit for his/her family member. You may not be aware, but since NetApp showed the leadership of starting the ABA benefit, a large list, including many of your peers, have added comprehensive autism benefits, including ABA. A sample of companies with such a benefit include: Analog Devices, Cisco Systems, Electronic Arts, EMC, Google, Intel, Juniper Networks, Microsoft, National Semiconductor, Oracle, Symantec (to be added July 2011), Wells Fargo, and Yahoo.

Successful early intervention for children with autism also benefits society by significantly reducing the future burden on taxpayers and contributing more individuals with autism into a productive work

environment, further adding to the tax base of a community. A Pennsylvania study of state funding for autism therapies projected an actual cost savings to that state of over a million dollars per child.⁵

For all of these reasons, we respectfully recommend that you reconsider your decision to eliminate early intervention and ABA treatments. One of your employees recently met with Nancy Saunders, Senior VP of Human Resources, and provided her with a presentation which includes more detail on this information – a copy of that presentation is attached for your review. We would be happy to speak or meet with you directly; I can be reached at 803-582-9905. Also, two members of our workgroup are located in California and would be happy to meet with you: Kristin Jacobson, MBA, at (650) 759-5737 or kjacobson5@yahoo.com, or Karen Fessel, DrPH, at 510-325-0975 or karenfes@sbcglobal.net.

On behalf of your employees who are fighting the challenges of autism every day, we thank you for consideration.

Sincerely yours,

Lorri Shealy Unumb, J.D.

Parent Name Address
Date
Name Director of Benefits
Dear :
I write to request that amend its self-funded health plan. Specifically, I request that implement autism benefits, including coverage for Applied Behavior Analysis (ABA), commensurate with the Massachusetts autism insurance reform signed into law on August 3, 2010.
Because autism is a severe, chronic neurological disorder, which results in significant lifelong disability, the goal of treatment is to promote the child's social and language development and minimize behaviors that interfere with the child's functioning and learning. Applied Behavior Analysis, or ABA, is a method of treating children with autism. It is considered by many researchers and clinicians to be the most effective evidence-based therapeutic approach demonstrated thus far for children with autism. ¹ The efficacy of ABA has been widely endorsed by medical and governmental authorities including the U.S. Surgeon General, the National Institute of Mental Health, and the American Academy of Pediatrics who noted that "Children who receive early intensive behavioral treatment have been shown to make substantial, sustained gains in IQ, language, academic performance, and adaptive behavior as well as some measures of social behavior, and their outcomes have been significantly better than those of children in control groups."
In the past, insurers have denied coverage for ABA on the basis that it is "experimental" or "educational." But these claims are simply not supported by science, as evidenced by the research cited above. Recently, the U.S. Office of Personnel Management (OPM), issued guidance to insurers who participate in the Federal Employees Health Benefit program stating, "The OPM Benefit Review Panel recently evaluated the status of Applied Behavior Analysis (ABA) for children with autism. Previously, ABA was considered to be an educational intervention and not covered under the FEHB Program. The Panel concluded that there is now sufficient evidence to categorize ABA as medical therapy."
Recognition of the efficacy of ABA for improving the quality of life for children with autism has led states across the country to mandate state-based health insurers to cover evidence-based medically necessary autism therapies, such as ABA. Thirty one states, including Massachusetts have now passed autism mandates, requiring insurers to cover medically necessary treatment of autism, and specifically includes ABA therapy.
Although this law is not enforceable on self-funded health plans, such as

¹ Simpson, R. L. 1999. "Early Intervention with Children with Autism: The Search for Best Practices." *Journal of the Association for Persons with Severe Handicaps* 24(3): 218-221.

institutions of higher education such as Princeton, Ohio State University and the University of Minnesota, have opted to provide coverage for autism therapies within their own self-funded health plans.

Within Massachusetts, many self-funded corporations, including State Street Corporation and Partners Healthcare are covering services under the mandate. We believe a decision to cover treatment should be focused on need, but note that, according to the State's independent analysis of the mandate, this coverage is not particularly expensive, and has a negligible impact on premiums. This is also supported by other financial analyses, and the experience in other states that already have similar laws. If this is of further interest we would be happy to put you in touch with people who could provide more specific details. should cover ABA for employee dependents with autism as part of its mission to be a family-friendly employer. According to the ______'s website: "_____ cares deeply about providing an environment and a range of programs that assist our employees in achieving an appropriate balance among work, personal and family commitments." From subsidizing backup childcare to generous leave policies for new parents, _____ strives to be a family-friendly place and advertises itself as such. (look for similar statements/language on your company's website/HR info). 's mission, implementing autism benefits makes good financial sense Beyond its place in for the Company and for society. It behooves _____ to help employees provide treatment for their autistic children. Employees whose autistic children can benefit from ABA will be more productive. Employee recruitment and retention is maximized as people will not feel the need to leave in search of a job with state-regulated insurance. Autistic children who are helped by ABA to achieve higher levels of functioning have lower overall health costs and need less assistance from their families. Successful early intervention for children with autism significantly reduces the future burden on taxpayers. A Pennsylvania study of private insurance coverage for autism therapies projected an actual cost savings to that state of over a million dollars per child.² itself has a history of supporting the autism community. (Note any past support for events, contributions, employee assistance with flexibility, leave-taking, etc. If there isn't a lot of autism-specific things, you could cite support of families with other serious illnesses, disabilities, causes, etc.) For all of these reasons, I urge to voluntarily implement autism benefits in its self-funded health plan. ABA is supported by science. It is well regarded in the medical community. Funding autism therapies, including ABA, is in accordance with _______'s mission and its history of supporting the autism community. It is the right thing to do for ______, its employees, and the greater community. The Autism Insurance Resource Center at UMass Medical School and Autism Speaks have helped other

institutions implement autism benefits in their self-funded health plans. They stand ready to help

On behalf of my *son/daughter* ____ and all the other children of ____ employees who are fighting the challenges of autism every day, I thank you for considering this most urgent request.

take this step and I would be happy to put you in touch with them directly.

Sincerely,

² John W. Jacobson, James A. Mulick, Gina Green, Cost-Benefit Estimates for Early Intensive Behavioral Intervention for Young Children with Autism – General Model and Single State Case. 13 Behavioral Interventions, 201-26 (1998).

```
[today's date]

[company contact first name] [company contact last name]
[company contact title]
[company name]
[company address line 1]
```

[company address line 2]
[company city], [company state] [company zip code]

Dear [company contact pronoun] [company contact last name],

I am writing on behalf of my [son or daughter], [name of child], who was diagnosed with aut ism in [month of child's diagnosis] [year of child's diagnosis]. As part of [name of child]'s treatment [child pronoun] has been prescribed applied behavior analysis (ABA). The health bene fit plans offered by [company name] do not cover ABA for autism. This denial of coverage has created significant financial and emotional hardship for my family. I ask that you please consider adding coverage for ABA for autism to [company name]'s health bene fit plan commensurate with [company state]'s autism insurance reform law which was enacted in [year AIR law enacted].

Autism is a neu rological condition affecting brain development. While au tism presents a spectrum of severity, all affected individuals share, to varying degrees, deficits in communication and social skills. Affected individuals also have repetitive pat terms of be havior and a narrow range of interest s. Although there is no cure for autism, it is treatable. Malad aptive beha viors can be eliminated and a child can develop appropriate communication and social skills.

ABA is a type of be ha vioral the rap y and is the most commonly prescribed evidence based treatment for autism. ABA is provided one on one and is very intense. Severely affected children may be prescribed as much as 40 hours a week for several years or more. Research demonstrates that almost 50% of children with autism that receive ABA will achieve a normal IQ. This compares to only 2% of children in control groups that did not receive ABA. Half of the children who receive ABA will mainstream in regular education without as sistance by early element ary school. An additional 42% will improve such that they will require much less intense special education than if they had not received appropriate early intervention.

Forty-six (46) states require that state-regulated health plans cover the diagnosis and treatment of autism, including ABA. Actual claims data from States which were among the first to enact such legislation show the average cost of coverage is less than \$0.50 per member per month. A growing number of self-funded health benefit plans also provide coverage for ABA for autism. A 2015 national survey of companies with greater than 500 employees shows that 37% of large companies (most of which provide self-funded health benefit plans) now provide health insurance that covers intensive beha vioral the rapies for autism such as ABA. In fact, 60% of companies in the Fortune 50 cover ABA, which includes two of the largest health insurance carriers. Autism claims data from the se plans are consistent with that from state regulated plans, representing less than 0.2% of total health care costs.

While the costs of providing coverage for both state regulated and self-funded health insurance plans has proven to be negligible, if forced to pay for treatment out of pocket the cost is prohibitive. Without the addition of a meaningful autism benefit to [company name] 's health plan that includes coverage for ABA, my family will not be able to provide [name of child] with this life-changing treatment.

Autism Speaks is the world's leading autism science and advoca cy organization. In addition to advocating for state autism insurance reform laws, Autism Speaks' Government Affairs team also serve as a resource for companies that are considering adding an autism benefit to their self funded health benefit plan. I have spoken to Lorri Unumb who is the Vice President, State Government Affairs at Autism Speaks and if you are available for a meeting she would be happy to discuss this with you and other representatives of the company in more detail. (You can reach her directly at lorri.unumb@ autismspeaks.org.) Please provide me some possible meeting dates at your earliest convenience.

Thank you for considering making this change to the [Company Name] 's health plan, it that will be so important to my family's future.

Since rely,

[Employee Name or Spouse]

Employers' Experience

Nicholas W. Zuk Senior Vice President Secretary & General Counsel Writer's Direct Dial No. (614) 559-2512 E-mail: zukn@whitecastle.com

April 23, 2012

Autism Speaks Michael L. Wasmer, DVM Associate Director State Government Affairs 1990 K Street, NW Washington, DC 20006

Dear Mr. Wasmer:

Re: Autism Spectrum Disorder ("Autism")

We are writing to share background on White Castle's experience offering health insurance coverage for families impacted by autism spectrum disorder. Autism affects millions of individuals and their families. Consequently, a number of States have enacted legislation that requires health insurance to cover the treatment of autism, including behavioral health treatments such as Applied Behavior Analysis (ABA). Although self-funded health benefit plans such as those offered by White Castle are not subject to state law, we have designed our plan to provide the autism coverage that many state-regulated plans have adopted. We thought it might be worthwhile to share our experience as a private sector employer.

Relevant Background

- White Castle is a privately held, family owned business with our Home Office in Columbus, Ohio. We have 410 White Castle restaurants in 12 states, as well as operating 3 meat plants, 2 bakeries, 2 frozen food plants and 3 manufacturing facilities.
- White Castle employs close to 10,000 team members, with over 5,000 full time employees in various roles throughout the organization. We are known for the tremendous loyalty of our employees with close to 1/3 having been employed with us for 10 years or more.
- White Castle has a long record of providing health insurance coverage. In fact, we first created a health insurance program in 1924. Today, we are self-insured and have approximately 4,200 of our full time team members who participate in the program, with coverage to team members and their dependents providing peace of mind to over 9,000 individuals.
- Philosophically, White Castle has long maintained that for team members to have the most positive impact with customers and in their own work place, it is essential, to the extent we are able, to provide "freedom from anxiety".

Why White Castle provides health insurance coverage for families impacted by autism

In recent years, as the diagnosis rate for Autism has rapidly increased to levels as high as 1 in 88 children, and 1 in 54 boys. Our Health Plan covers various expenses related to the diagnosis, evaluation and treatment of Autism. Examples of some common covered expenses in accordance with the provisions of our plan are speech therapy, occupational therapy, intensive behavioral intervention programs (such as Lovaas therapy), and ABA (including discrete trial training, workshop expenses, professional psychologist/behaviorist, and tutors).

When we first included Autism coverage as part of the White Castle plan, we knew it was the right thing to do – but candidly, we did have serious concerns and questions about what the cost implications would be. We did march ahead, and the actual costs in a typical year have been significantly lower than expected. It is difficult to determine because of HIPAA rules if some diagnoses that are related to Autism are not coded correctly in the information that is provided to our Third Party Administrator, but I can say with a reasonable degree of confidence, that the cost of providing this benefit is no more than other coverage that White Castle provides.

As a privately held, family-owned company that maintains an ERISA qualified self-insured plan, we are somewhat constrained with what specifics we're able to share, but we can tell you that in our 2011 fiscal year, the cost for autism spectrum disorder related claims was less than \$1.00 per employee per month and the total spend was less than 0.2% of our investment in health care coverage.

While our actual costs have been less than expected, our employees are deeply appreciative of White Castle's efforts to be a leader in an area that today is impacting more families than ever.

Please feel free to contact me if I can provide additional information.

Best regards,

Nicholas Zuk

ImeWarner

Autism Support Program April 21, 2009

The Process of Developing a Comprehensive Solution

- Three years ago, Time Warner announced that it would "cover" autism
- At the time this amounted to no practical change in benefits coverage because the diagnosis was already covered for 'traditional services'
- Applied Behavior Analysis et al, well known therapies in the autism world, were/are still deemed experimental and in most cases not rendered by licensed providers
- On 1/09 we began providing coverage up to age 9 and up to an annual limit of \$30,000 and lifetime limit \$90,000 for autism spectrum disorders (ASD), including intensive behavioral therapies
- Analyst with over 14 years experience working with children with ASD was hired as Kristie Thompson, Ph.D., LPA, BCBA-D, Psychologist and Certified Behavior Time Warner's autism advocate
- solutions, we enhanced our partnership with OptumHealth (UHC & UBH), who also manages the Cisco autism benefit, and engaged an autism advocate to: To support this benefit and expand upon our extensive care management
- Provide education, case management and support to families
- Ensure caregivers understand treatment options and are effectively linked to quality and appropriate treatment resources
- Help employees navigate their local early intervention and special education systems and coach them to optimize those resources
- Foster ties to our highest density school districts

The Time Warner Autism Program

Key Components:

- Centers of Excellence for treatment
- Case management
- Advocacy and support by a dedicated autism advocate
- Comprehensive integrated medical and behavioral model
- We implemented a benefit plan to be aligned with the services identified by the American Academy of Pediatrics, understanding that these guidelines considered "promising" therapies
- A comprehensive individualistic approach based on deficits identified from an assessment
- Behavioral therapies up to 25 hours/week for 12 months
- Therapies recommended are monitored quantitatively
- Centers of excellence where they exist or specialized programs
- Applied Behavior Analysis (ABA) is the cornerstone of management of ASD
- ABA addresses communication, social skills, daily living skills, therapeutic play, leisure skills and maladaptive behavior

Expected Cost Impact for Time Warner

- Disease Control to determine the expected cost impact to Time Warner for In developing this solution, an analysis was completed based on existing claims data and national normative prevalence data from the Centers for offering a comprehensive Autism benefit that included an annual and lifetime allotment of reimbursement for ABA services
- For the plan design of \$30,000 a year with a \$90,000 lifetime maximum for children up to the age of 9, the expected cost impact to Time Warner for 2009 is \$915,000 (~0.4% of claims)
- Based on 1:150 Time Warner members younger than age 9 impacted and diagnosed with ASD and 100% of families enrolling in the program
- will be required to offer all of the Autism benefits including the ABA services guidelines that will effect Time Warner Inc. on 1/1/2010, we believe that we Based on our current understanding of the federal mental health parity at a level equal to our other medical plan offerings, which is unlimited
- Based on the federal mental health parity guidelines, it is expected that the program costs will increase in 2010 to \$1,225,000 (~0.6% of claims)

Member Engagement Summary

- continued to promote the benefit with on site staff representation at all of our We promoted the new benefit in the fall during open enrollment and have larger employee work places
- Offering general sessions as well as individual planning sessions
- Conducted telephonic and mail based outreach to identified families based on claims data to provide them with direct information about the program availability
- To date, we have engaged 41 families in the program
- We expect to begin to receive specific program satisfaction survey data by June of 2009
- Only one family declined to participate in the program

Very positive feedback to date on the program

Your Health Benefit Booklet

M-22 COVERED SERVICES

Treatment of a sickness or injury by medical professionals from an Ambulance Service when you are not transported will be covered if Medically Necessary.

Other vehicles which do not meet this definition, including but not limited to ambulettes, are not Covered Services.

Ambulance services are a Covered Service only when Medically Necessary, except:

- When ordered by an employer, school, fire or public safety official and the Member is not in a position to refuse; or
- When a Member is required by the Plan to move from a Non-Network Provider to a Network Provider.

Ambulance trips must be made to the closest local facility that can give Covered Services appropriate for your condition. If none of these facilities are in your local area, you are covered for trips to the closest facility outside your local area. Ambulance usage is not covered when another type of transportation can be used without endangering the Member's health. Any ambulance usage for the convenience of the Member, family or Physician is not a Covered Service.

Non Covered Services for Ambulance include but are not limited to, trips to:

- a Physician's office or clinic;
- a morgue or funeral home.

Autism Spectrum Disorders

See the Schedule of Benefits for any applicable Deductible, Coinsurance, Copayment, and Benefit Limitation information.

The diagnosis and treatment of Autism Spectrum Disorders for Members ages one (1) through twenty-one (21) is covered. Autism Spectrum Disorders means a physical, mental, or cognitive illness or disorder which includes any of the pervasive developmental disorders as defined by the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders ("DSM") published by the American Psychiatric Association, including Autistic Disorder, Asperger's Disorder, and Pervasive Developmental Disorder Not Otherwise Specified.

Treatment for autism spectrum disorders includes the following care for an individual diagnosed with any of the autism spectrum disorders:

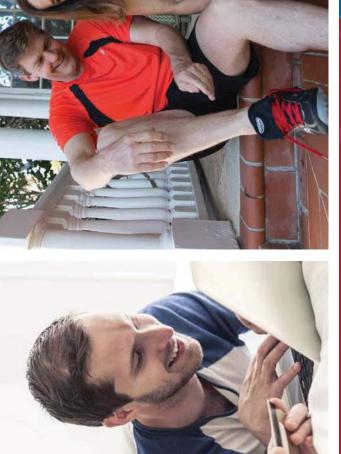

- Medical care services provided by a licensed physician, an advanced registered nurse practitioner, or other licensed health care provider;
- Habilitative or rehabilitative care professional counseling and guidance services, therapy, and treatment programs, including applied behavior analysis, that are necessary to develop, maintain, and restore, to the maximum extent practicable, the functioning of an individual;
- Pharmacy care, if covered by the Plan Medically Necessary medications prescribed by a licensed physician or other health-care practitioner with prescribing authority, if covered by the plan, and any medically necessary health-related services to determine the need or effectiveness of the medications;
- Psychiatric care direct or consultative services provided by a psychiatrist licensed in the state in which the psychiatrist practices;

COVERED SERVICES M-23

 Psychological care - direct or consultative services provided by an individual licensed by the Kentucky Board of Examiners of Psychology or by the appropriate licensing agency in the state in which the individual practices;

- Therapeutic care services provided by licensed speech therapists, occupational therapists, or physical therapists; and
- Applied behavior analysis prescribed or ordered by a licensed health or allied health professional. Applied behavior analysis means the design, implementation, and evaluation of environmental modifications, using behavioral stimuli and consequences, to produce socially significant improvement in human behavior, including the use of direct observation, measurement, and functional analysis of the relationship between environment and behavior

No reimbursement is required under this section for services, supplies, or equipment:

- For which the Member has no legal obligation to pay in the absence of this or like coverage;
- Provided to the Member by a publicly funded program;
- Performed by a relative of a Member for which, in the absence of any health benefits coverage, no charge would be made; and
- For services provided by persons who are not licensed as required by law.

Behavioral Health Services

See the Schedule of Benefits for any applicable Deductible, Coinsurance/Copayment information. Coverage for Inpatient Services, Outpatient Services, and Physician Home Visits & Office Services for the treatment of Behavioral Health conditions is provided in compliance with federal law.

Behavioral Health Services coverage also includes Residential Treatment services. Residential Treatment means individualized and intensive treatment in a residential setting, including observation and assessment by a psychiatrist weekly or more frequently, an individualized program of rehabilitation, therapy, education, and recreational or social activities.

Congenital Defects and Birth Abnormalities

Covered Services include coverage for necessary care and treatment of medically diagnosed congenital defects and birth abnormalities.

Dental Services

See the Schedule of Benefits for any applicable Deductible, Coinsurance, Copayment, and Benefit Limitation information.

DTE Energy Autism and Related Disorders Benefit Program

Benefits Include:

• Diagnosis and Assessment

- Neuropsychological Evaluation, including; neuropsychological testing as needed, for diagnostic purposes; e.g., intellectual disability or psychiatric disorder.
- o Speech and Language Evaluation
- o Developmental Pediatric evaluation
- o Genetics/Metabolic Disorder evaluation
 - May include: Chromosomal anlaysis, Fragile X syndrome analysis, Rett syndrome, Subtelomeric fluorescent *in situ* hybridization, Comparative genomic hybridization (CGH) microarray analysis, and/or metabolic testing.
- o Neurological evaluation
 - Possible imaging studies
- o Psychological, Psychiatric, and Pharmaceutical Evaluation

To be covered, assessments will require the use of one or more the following evidence-based diagnostic tools.

Evidence-Based Diagnostic Tools

- Childhood Autism Rating Scale (CARS)
- The Autism Diagnostic Observation Schedule (ADOS)
- Social Communication Inventory (SCI)
- The Child Behavior Checklist (CBCL)
- The Childhood Development Inventory (CDI)
- Other

• Interventions and Treatment

- o Psychological, Psychiatric, and Pharmaceutical Intervention:
 - Individual therapy/counseling
 - Parent training/counseling
 - Cognitive behavioral training
 - Social skills groups
 - Neuropsychological interventions
 - Pharmacological intervention (Abilify, Risperdol) (Non-preferred medications. Will be authorized as preferred medications for the treatment of autism)
 - Nutrition
 - Speech, Occupational, Physical Therapy

• Applied Behavioral Analysis (ABA) Benefits

- Those who meet criteria for full Autism Disorder (AD) criteria: Intensive, 1-1, discrete trial therapy:
 - Typically, Cognitive Impairment (CI)/Mental Retardation (MR).
 - Typically, function on the lower functioning end of the autism spectrum.
 - Require intensive, frequent, 1-1 therapy, in a clinic or home (self-contained) setting.
 - Typically, therapy period lasts 1-2 years.
 - Ultimate therapy goal: Minimize disruptive, non-productive behaviors, part-time placement in regular education classroom, with moderate special educational support. Functional communication and daily living skills.
 - Requires second opinion by an independent qualified specialist (CADD team) to receive this maximum benefit.
- Those who meet criteria for Pervasive Developmental Disorder (PDD):
 Parent training program/Pivotal Response Treatment (PRT)
 - May or may not have CI/MR. If present, to a lesser degree than AD.
 - Typically, function in the mid-high functioning level of the autism spectrum
 - Require frequent intervention implemented by trained caregivers in both clinic and home settings
 - Typically, therapy period lasts 1-2 years
 - Ultimate therapy goal: Low to average IQ, regular education classroom with modest special education support (i.e., speech therapy)
- Those who meet criteria for Autism, PDD, or Asperger: Behavioral consultation which may be needed separately, without options i or ii (above) or following either option presented above:
 - May or may not have CI/MR, depending on diagnosis
 - Functioning level from low to high
 - Require consultative intervention for caregivers and/or educators. Purpose of intervention is to modify the "systems" surrounding the child, in an indirect manner, through appropriate functional analysis of behavior, institution of supports, response strategies, and environmental modifications to effect change in the child.
 - Typically, intervention period lasts 3-6 months.
 - Ultimate therapy goal: Eliminate unwanted, nonproductive behaviors and improve skills through replacement behaviors/communication. Fully functional in all settings; home, school, and community.

• Provider Qualifications

o Diagnosis and Assessment

- Developmental Pediatrician (M.D./D.O)
- Pediatric Neurologist (M.D.)
- Child Neuropsychologist (Ph.D.)
- Board Eligible/Board Certified Child Adolescent Psychiatrist (M.D./D.O.)
- Board Certified, Licensed Psychologist (Ph.D.)
- Certified Speech/Language Pathologist (Ph.D., autism specialist)
- Board Certified, Medical Geneticist (M.D., Ph.D.)

o <u>Interventions and Treatment</u>

- Speech Language Pathologist: Must hold (minimally) Certificate of Clinical Competence (CCC) and Master's Level degree in S/L Pathology.
- Occupational Therapist: OTR certification
- Physical Therapist: PT certification
- Psychologist: Must hold (minimally) Master's level degree in Psychology and licensure.
- Nutritionist: CCN certification
- ABA Therapist: BCBA certification.

• Provider Locations

- o Henry Ford Health System (HFHS)
- o Beaumont Hospital
- o The Early Intervention Center (Intervention only)
- o University of Michigan Hospitals
- o Children's Hospital of Michigan
- Pine Crest Christian Health System: Diagnostic services located at Main Campus in Grand Rapids and Traverse City
- Hope Network: Grand Rapids/Lansing area: Diagnostic and intervention services
- o In private-practice ABA Therapists who meet the provider qualifications listed above.

Capital One Plan Benefits

- ABA therapy: 100% coverage for in or out of network providers.
 - No age limits
 - o No dollar cap or limits
 - o Use the tutor model with certification required by a BCBA.
 - o Initial and concurrent review required to maintain coverage.
- Coverage for speech, OT and PT services.
 - o No annual limit on visits.
- Associate costing sharing is plan deductible and coinsurance.
 - o 70, 80 or 90% depending on the plan enrolled in.

Comments: Cost to the plan has been immaterial at \$275,000 in 2010 in a medical budget of \$200M.

Iron Mountain Information Management, Inc.
OPEN ACCESS PLUS MEDICAL BENEFITS- Premier Plan
EFFECTIVE DATE: January 1, 2011
OAP1 3206164
This document effective May, 2011 takes the place of any documents previously issued to you which described your benefits.
Printed in U.S.A.

United States or its territories. This coverage is subject to the following conditions and limitations.

Transplant services include the recipient's medical, surgical and Hospital services; inpatient immunosuppressive medications; and costs for organ or bone marrow/stem cell procurement. Transplant services are covered only if they are required to perform any of the following human to human organ or tissue transplants: allogeneic bone marrow/stem cell, autologous bone marrow/stem cell, cornea, heart, heart/lung, kidney, kidney/pancreas, liver, lung, pancreas or intestine which includes small bowel-liver or multi-visceral.

All Transplant services, other than cornea, are covered at 100% when received at CIGNA LIFESOURCE Transplant Network® facilities. Cornea transplants are not covered at CIGNA LIFESOURCE Transplant Network® facilities. Transplant services, including cornea, received at participating facilities specifically contracted with CIGNA for those Transplant services, other than CIGNA LIFESOURCE Transplant Network® facilities, are payable at the In-Network level. Transplant services received at any other facilities, including Non-Participating Providers and Participating Providers not specifically contracted with CIGNA for Transplant services, are covered at the Out-of-Network level.

Coverage for organ procurement costs are limited to costs directly related to the procurement of an organ, from a cadaver or a live donor. Organ procurement costs shall consist of surgery necessary for organ removal, organ transportation and the transportation, hospitalization and surgery of a live donor. Compatibility testing undertaken prior to procurement is covered if Medically Necessary. Costs related to the search for, and identification of a bone marrow or stem cell donor for an allogeneic transplant are also covered.

Transplant Travel Services

Charges made for reasonable travel expenses incurred by you in connection with a preapproved organ/tissue transplant are covered subject to the following conditions and limitations. Transplant travel benefits are not available for cornea transplants. Benefits for transportation, lodging and food are available to you only if you are the recipient of a preapproved organ/tissue transplant from a designated CIGNA LIFESOURCE Transplant Network® facility. The term recipient is defined to include a person receiving authorized transplant related services during any of the following: (a) evaluation, (b) candidacy, (c) transplant event, or (d) posttransplant care. Travel expenses for the person receiving the transplant will include charges for: transportation to and from the transplant site (including charges for a rental car used during a period of care at the transplant facility); lodging while at, or traveling to and from the transplant site; and food while at, or traveling to and from the transplant site.

In addition to your coverage for the charges associated with the items above, such charges will also be considered covered travel expenses for one companion to accompany you. The term companion includes your spouse, a member of your family, your legal guardian, or any person not related to you, but actively involved as your caregiver. The following are specifically excluded travel expenses:

travel costs incurred due to travel within 60 miles of your home; laundry bills; telephone bills; alcohol or tobacco products; and charges for transportation that exceed coach class rates.

These benefits are only available when the covered person is the recipient of an organ transplant. No benefits are available when the covered person is a donor.

GM6000 05BPT7 V11

Breast Reconstruction and Breast Prostheses

charges made for reconstructive surgery following a
mastectomy; benefits include: (a) surgical services for
reconstruction of the breast on which surgery was
performed; (b) surgical services for reconstruction of the
nondiseased breast to produce symmetrical appearance; (c)
postoperative breast prostheses; and (d) mastectomy bras
and external prosthetics, limited to the lowest cost
alternative available that meets external prosthetic
placement needs. During all stages of mastectomy,
treatment of physical complications, including lymphedema
therapy, are covered.

Reconstructive Surgery

charges made for reconstructive surgery or therapy to repair
or correct a severe physical deformity or disfigurement
which is accompanied by functional deficit; (other than
abnormalities of the jaw or conditions related to TMJ
disorder) provided that: (a) the surgery or therapy restores
or improves function; (b) reconstruction is required as a
result of Medically Necessary, noncosmetic surgery; or (c)
the surgery or therapy is performed prior to age 19 and is
required as a result of the congenital absence or agenesis
(lack of formation or development) of a body part. Repeat
or subsequent surgeries for the same condition are covered
only when there is the probability of significant additional
improvement as determined by the utilization review
Physician.

GM6000 05BPT2 V2

Autism Spectrum Disorder – effective 4/1/2011

 Charges for the diagnosis and treatment of autism spectrum disorder. Autism spectrum disorders are any of the pervasive developmental disorders as

32 <u>myCIGNA.com</u>

defined in the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders. These disorders include: autistic disorder; Asperger's disorder; and pervasive developmental disorders not otherwise specified.

Diagnosis includes the following: Medically Necessary assessments; evaluations, including neuropsychological evaluations; genetic testing; or other tests to diagnose whether an insured has one of the autism spectrum disorders.

Treatment includes the following care when prescribed, provided or ordered by a licensed physician or licensed psychologist who determines the care to be Medically Necessary: Habilitative or Rehabilitative; pharmacy; Psychiatric; Psychological; and therapeutic.

Habilitative or Rehabilitative care means professional counseling and guidance services and treatment programs, including, but not limited to, applied behavior analysis supervised by a board certified behavior analyst, that are necessary to develop, maintain and restore, to the maximum extent practicable, the functioning of an individual. Applied behavior analysis includes the design, implementation and evaluation of environmental modifications, using behavioral stimuli and consequences, to produce socially significant improvement in human behavior, including the use of direct observation, measurement and functional analysis of the relationship between environment and behavior.

Psychiatric care means direct or consultative services provided by a psychiatrist licensed in the state in which the psychiatrist practices.

Psychological care means direct or consultative services provided by a psychologist licensed in the state in which the psychologist practices.

Therapeutic care includes services provided by licensed or certified speech therapists, occupational therapists, physical therapists or social workers.

Pharmacy care is included to the same extent that such care is provided by the policy for other medical conditions.

The guidelines used by the insurance company to determine if coverage for the diagnosis and treatment of autism spectrum disorder is Medically Necessary will be:

• developed with input from practicing physicians in the insurer's service area;

- developed in accordance with the standards adopted by national accreditation organizations;
- updated at least biennially or more often as new treatments, applications and technologies are adopted as generally accepted professional medical practice; and
- evidence-based, if practicable.

In applying such guidelines, the insurer will consider the individual health care needs of the insured.

Benefits are payable on the same basis as for the diagnosis and treatment of other physical conditions. No annual or lifetime visit or dollar limits apply to the diagnosis and treatment of autism spectrum disorder.

No coverage is provided for services to an individual under: an individualized family service plan; an individualized education program; an individualized service plan; or for services related to autism spectrum disorder provided by school personnel under an individualized education program.

33 myCIGNA.com

Summary Plan Description

Aetna EPO Plan

Effective January 1, 2011

- Provides services managed by a licensed Behavioral Health Provider who, while not needing to be individually contracted, needs to:
- Meet the Aetna credentialing criteria as an individual practitioner
- Function under the direction and supervision of a licensed psychiatrist (Medical Director)
- Has individualized active treatment plan directed toward the alleviation of the impairment that caused the admission.
- Provides a level of skilled intervention consistent with patient risk.
- Meets any and all applicable licensing standards established by the jurisdiction in which it is located.
- Is not a Wilderness Treatment Program or any such related or similar program, school, or education service.
- Has the ability to assess and recognize withdrawal complications that threaten life or bodily functions and to obtain needed services either on-site or externally.

To receive benefits, you must be admitted by a physician.

Additional substance abuse treatment facility requirements include:

- For member detoxification services, the residential treatment facility must have the availability of on-site medical treatment 24 hours a day, 7 days a week and must be actively supervised by an attending physician.
- 24 hours a day, 7 days a week supervision by a physician with evidence of close and frequent observation.
- On-site, licensed Behavioral Health Providers and medical or substance abuse professionals 24 hours a day, 7 days a week.

Psychological and neuropsychological testing

You pay \$25 copay per office visit. Aetna Behavioral Health considers neuropsychological (NPT) or psychological testing (PT) medically necessary when needed to enhance psychiatric or psychotherapeutic treatment outcomes after a detailed diagnostic evaluation if:

Testing is needed to aid in the differential diagnosis
of behavioral or psychiatric conditions when the
member's history and symptomatology are not readily
attributable to a particular psychiatric diagnosis and
the questions to be answered by testing could not

- be resolved by a psychiatric or diagnostic interview, observation in therapy, or an assessment for level of care at a mental health or substance abuse facility.
- Testing is needed to develop treatment recommendations after the member has been tried on various medications, psychotherapy, or both, has not progressed in treatment, and continues to be symptomatic.

Testing is not covered to diagnose or rule out:

- Attention Deficit Disorder (ADD)
- Attention Deficit/Hyperactivity Disorder (ADHD)
- · Learning disorder or disability

Autism coverage

You pay \$25 copay per visit. With Aetna Behavioral Health preauthorization, the autism benefit provides coverage for Intensive Behavioral Therapies (IBT) for team members and dependents with autism and autism spectrum disorders.

Each case will be reviewed, each diagnosis will be validated, and each treatment plan will be evaluated for appropriateness. Aetna Behavioral Health level of care standards shall be applied.

The Plan covers IBTs, including applied behavioral analysis (ABA) and Repetitive Behavioral Intervention (RBI) that has been preauthorized by Aetna Behavioral Health.

What is not covered

In addition to any other exclusions and limitations specified in this chapter, the following are not covered as mental health or substance abuse benefits under the Plan. Some services may be eligible for some level of coverage under the Plan. Please see Chapters 2 and 3 for more information about services and prescription drugs that may be covered by the Plan.

- The Plan will not pay benefits for any other services, treatments, items, or supplies, other than IBT, ABA, or RBI as defined by the Plan, even if recommended or prescribed by a physician, or if it is the only available treatment for autistic conditions.
- Behavioral health coverage for the autism benefit excludes tuition to publicly funded school-based programs for Pervasive Developmental Disorder (PDD) or any services provided by noneligible providers.
- · Chelation therapy
- · Vocational rehab

46 Aetna EPO Plan

- · Educational services
- · Dolphin therapy
- · Equine therapy
- · Recreational therapy
- · Academic education during residential treatment
- · Aversion therapy
- Care that does not meet the Aetna Behavioral Health coverage criteria guidelines
- Court-ordered psychiatric or substance abuse evaluation, treatment, or psychological testing unless Aetna Behavioral Health determines that such services are medically necessary for the treatment of a DSM-IV mental disorder.
- Custodial care, regardless of the setting in which such services are provided. Custodial care is defined as services that do not require special skills or training, and that either:
- Provide assistance in activities of daily living (including but not limited to feeding, dressing, bathing, ostomy care, incontinence care, checking of routine vital signs, transferring, and ambulating)
- Do not require continued administration by trained medical personnel in order to be delivered safely and effectively
- Services for or related to educational testing, rehabilitation, or learning disabilities (except as listed as covered elsewhere in this SPD)
- Experimental or investigational therapies as determined by Aetna Behavioral Health. Generally, health care supplies, treatments, procedures, drug therapies, or devices that are determined to be any of the following:
- Not generally accepted by informed health care professionals in the U.S. as effective in treating the condition, illness, or diagnosis for which their use is proposed
- Not proven by scientific evidence to be effective in treating the condition, illness, or diagnosis for which their use is proposed
- Undergoing scientific study to determine safety and efficacy
- Non-abstinence-based or nutritionally based substance abuse treatment
- Charges for missed appointments, room or facility reservations, completion of claim forms, or record processing

- Services performed by a provider who is a family member by birth or marriage, including spouse, brother, sister, parent, or child, including any service the provider may perform on him- or herself
- Services performed by a provider with your same legal residence
- Claims filed more than 12 months from the date of service
- Services received after the date your coverage under the Plan ends, including services for conditions arising or under treatment before your coverage ends
- Interest or late fees charged due to untimely payment for services
- · Out-of-network services, unless approved by Aetna
- Private duty nursing (see the "<u>Extended</u> skilled nursing care" section on page 18 for more information)
- Psychiatric or psychological examinations, testing, or treatment that Aetna Behavioral Health determines is not medically necessary, but which nevertheless may be required for purposes of obtaining or maintaining employment or insurance, or pursuant to judicial or administrative proceedings
- Psychological or neuropsychological testing that has not been preauthorized by Aetna Behavioral Health
- State hospital treatment, except when determined by Aetna Behavioral Health to be medically necessary
- Therapies that do not meet national standards for mental health professional practice: for example, primal therapy, bioenergetic therapy, crystal healing therapy, rolfing, megavitamin therapy, or vision perception training
- Treatment for personal or professional growth, development, or training, or professional certification
- Treatment for stammering or stuttering, including that to maintain employment or insurance
- Treatment not provided by an independently licensed psychiatrist, psychologist, or master-level mental health provider
- Treatment of chronic pain, except when rendered in connection with treatment of a DSM-IV mental disorder
- Treatment of a covered health care provider who specializes in the mental health care field and who receives treatment as a part of their training in that field

Aetna EPO Plan 47

- Treatment of impulse control disorders such as pathological gambling, kleptomania, pedophilia, or caffeine
- · Treatment of antisocial personality disorder
- Treatment in wilderness programs or other similar programs
- · Educational services:
- Any services or supplies related to education, training, or retraining services or testing, including special education, remedial education, job training, and job hardening programs
- Evaluation or treatment of learning disabilities, minimal brain dysfunction, developmental, learning and communication disorders, behavioral disorders, (including pervasive developmental disorders) training or cognitive rehabilitation, regardless of the underlying cause
- Services, treatment, and educational testing and training related to behavioral (conduct) problems, learning disabilities, and delays in developing skills
- Services that do not meet the criteria established in, or are excluded under, the Aetna Behavioral Health's mental health and substance abuse coverage policy guidelines

Claims and appeals

All claims must be filed within 12 months from the date of service.

If you use a network provider, the provider will file the claim for you, and Aetna Behavioral Health will pay the provider directly.

To obtain a claim form, call Aetna at 1-888-802-4271 or visit <u>wfaetnaplan.com</u>.

If the provider files a claim on your behalf, you are still responsible for ensuring it is filed properly and within the required time frame. More information on filing claims can be found in "Appendix A: Claims and appeals" in your *Benefits Book*.

Mental health and substance abuse claim questions, denied coverage, and appeals

If you have questions or concerns about a claim already filed with Aetna, you may contact member services before filing an appeal with Aetna. For more information, see the "Contacts" section on page 1.

You may also file an appeal with Aetna without first informally contacting the Aetna member services department. An appeal must be filed within 180 days of the date of the adverse determination of your initial claim regardless of any verbal discussions that have occurred regarding your claim. Once you exhaust the internal appeals procedures, you are entitled to an external review of your claim.

Complete information on appeals is provided in the *Benefits Book*, "Appendix A: Claims and appeals."

48 Aetna EPO Plan

Summary Plan Description

UnitedHealthcare PPO Plan

Effective January 1, 2011

Mental Health and Substance Abuse Plan benefits

You can discuss your mental health or substance abuse needs in confidence or seek outpatient treatment referrals by calling either Employee Assistance Consulting (EAC) or UnitedHealthcare. When you call EAC or UHC and it's not an emergency, they will give you the name, address, and telephone number of one or more network providers in your area so you can make an initial appointment.

For treatment to be a covered health service, UBH must determine that the treatment is medically necessary, based on the UBH coverage criteria guidelines.

Pre-service authorization required

The services listed below also require pre-service authorization in order to receive benefits under the Plan. For preauthorization, contact UHC at 1-800-842-9722. Any authorization is limited to a specific number of services for a specific period of time. If additional services are needed, you will need to obtain a new authorization before receiving those services. Refer to the "Pre-service claim" section in "Appendix A: Claims and appeals" in your *Benefits Book* for more information.

- · Inpatient treatment
- Residential treatment centers (RTC)
- · Partial hospitalization
- Intensive outpatient treatment
- Structured outpatient treatment
- Out-of-network substance abuse
- · Autism treatment
- Psychological and neuropsychological testing

Emergency care

Please refer to the "<u>Emergency care</u>" section on page 19 for information.

Continuing review for hospitalization

While you are in the hospital, UBH will continue to review the medical necessity of your stay and treatment. If you receive services from an out-of-network therapist or facility, you have the option to move to a network therapist and facility where you will be covered at network benefits. If you choose not to transfer, you will receive the out-of-network benefit if available, or no coverage.

Residential treatment for children and adolescents

After you satisfy the deductible, you pay coinsurance. Residential treatment services are provided in a facility or a freestanding residential treatment center that provides overnight mental health services for individuals who do not require acute inpatient care but who do need 24-hour medical supervision.

To be covered, the center must include an adequate educational program, as determined by UBH at its discretion, for school-aged children and adolescents.

Admission to a residential treatment center is not intended for use solely as a long-term solution or to maintain the stabilization acquired during treatment in a residential facility or program.

Psychological and neuropsychological testing

After you satisfy the deductible, you pay coinsurance. Psychological and neuropsychological testing is covered with UBH preauthorization, when conducted for the purpose of diagnosing a DSM-IV (Diagnostic and Statistical Manual of Mental Disorders) mental disorder or in connection with treatment of such a mental disorder. Testing is not covered to diagnose or rule out:

- Attention Deficit Disorder (ADD)
- Attention Deficit/Hyperactivity Disorder (ADHD)
- · Learning disorder or disability

Autism coverage

After you satisfy the deductible, you pay coinsurance. With United Behavioral Health preauthorization, the autism benefit provides coverage for Intensive Behavioral Therapies (IBT) for covered participants and dependents with autism and autism spectrum disorders.

Each case will be reviewed, diagnosis validated, and treatment plan evaluated for appropriateness. UBH level of care standards shall be applied.

The Plan covers IBTs, including applied behavioral analysis (ABA) and Repetitive Behavioral Intervention (RBI), with preauthorization.

UnitedHealthcare PPO Plan 49

What is not covered

In addition to any other exclusions and limitations specified in this chapter, the following are not covered as mental health or substance abuse benefits under the Plan. Some services may be eligible for some level of coverage under the Plan. Please see "Chapter 2: UnitedHealthcare PPO Plan" starting on page 5 and "Chapter 3: Prescription drug benefit" starting on page 37 for more information about services and prescription drugs that may be covered by the Plan.

- The Plan will not pay benefits for any other services, treatments, items, or supplies, other than IBT as defined by the Plan, even if recommended or prescribed by a physician, or if it is the only available treatment for autistic conditions.
- Behavioral health coverage for the autism benefit excludes tuition to publicly funded school-based programs for Pervasive Developmental Disorder (PDD) or any services provided by noneligible providers.
- · Chelation therapy.
- · Respite care.
- · Vocational rehab.
- · Educational services.
- · Dolphin therapy.
- · Recreational therapy.
- Academic education during residential treatment.
- · Aversion therapy.
- Care that does not meet the UBH coverage criteria guidelines.
- Care that has not been preauthorized by UBH when required.
- Court-ordered psychiatric or substance abuse evaluation, treatment, or psychological testing unless UBH determines that such services are medically necessary for the treatment of a DSM-IV mental disorder.
- Custodial care, regardless of the setting in which such services are provided. Custodial care is defined as services that do not require special skills or training, and that either:
- Provide assistance in activities of daily living (including but not limited to feeding, dressing, bathing, ostomy care, incontinence care, checking of routine vital signs, transferring, and ambulating)
- Do not require continued administration by trained medical personnel in order to be delivered safely and effectively

- Services for or related to educational testing or learning disabilities.
- Experimental or investigational therapies as determined by UBH. Generally, health care supplies, treatments, procedures, drug therapies, or devices that are determined to be any of the following:
 - Not generally accepted by informed health care professionals in the U.S. as effective in treating the condition, illness, or diagnosis for which their use is proposed
 - Not proven by scientific evidence to be effective in treating the condition, illness, or diagnosis for which their use is proposed
 - Undergoing scientific study to determine safety and efficacy
- Non-abstinence-based or nutritionally based substance abuse treatment.
- Charges for missed appointments, room or facility reservations, completion of claim forms, or record processing.
- Services performed by a provider who is a family member by birth or marriage, including spouse, brother, sister, parent, or child, including any service the provider may perform on himself or herself.
- Services performed by a provider with your same legal residence.
- Claims filed more than 12 months from the date of service.
- Services received after the date your coverage under the Plan ends, including services for conditions arising or under treatment before your coverage ends.
- Interest or late fees charged due to untimely payment for services.
- Private duty nursing (see the "<u>Extended</u> skilled nursing care" section on page 20 for more information).
- Psychiatric or psychological examinations, testing, or treatment that UBH determines is not medically necessary, but which nevertheless may be required for purposes of obtaining or maintaining employment or insurance, or pursuant to judicial or administrative proceedings.
- State hospital treatment, except when determined by UBH to be medically necessary.
- Therapies that do not meet national standards for mental health professional practice: for example, primal therapy, bioenergetic therapy, crystal healing therapy, rolfing, megavitamin therapy, or vision perception training.

50 UnitedHealthcare PPO Plan

- Treatment for personal or professional growth, development, or training, or professional certification.
- Treatment for stammering or stuttering, including that to maintain employment or insurance.
- Treatment not provided by an independently licensed psychiatrist, psychologist, or master-level mental health provider.
- Treatment of chronic pain, except when rendered in connection with treatment of a DSM-IV mental disorder.
- Charges above reasonable and customary amounts as calculated by UHC/UBH using data tables from the Health Insurance Association of America.
- Services that do not meet the criteria established in, or are excluded under, the claims administrator's medical coverage policy guidelines.

Claims and appeals

All claims must be filed within 12 months from the date of service.

If you use a network provider, the provider will file the claim for you, and UBH will pay the provider directly.

If you use an out-of-network provider, to file your claim, complete an UHC or UBH claim form, attach itemized bills, and send to:

UnitedHealthcare PO Box 30884 Salt Lake City, UT 84130

You can request or print a claim form by:

- · Calling UHC at 1-800-842-9722 to request a form
- Going to <u>liveandworkwell.com</u> (access code: wellsfargo) or by going to <u>myuhc.com</u>

If the provider files a claim on your behalf, you are still responsible for ensuring it is filed properly and within the required time frame. More information on filing claims can be found in the *Benefits Book*, "Appendix A: Claims and appeals."

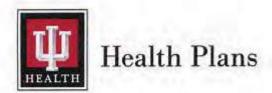

Mental health and substance abuse claim questions, denied coverage, and appeals

If you have questions or concerns about a claim already filed with UBH, you may contact Member Services before filing an appeal with UBH. For more information, see the "Contacts" section on page 1.

You may also file a written appeal with UBH without first informally contacting UBH Member Services. An appeal must be filed within 180 days of the date of the adverse determination of your initial claim regardless of any verbal discussions that have occurred regarding your claim. Once you exhaust the internal appeals procedures, you are entitled to an external review of your claim.

Complete information about claims and appeals is provided in the *Benefits Book*, "Appendix A: Claims and appeals."

UnitedHealthcare PPO Plan 51

Date: 9/22/2011
Dear

This letter is to notify you of a change to your IU Health Employee Health Plan coverage for Autism Spectrum Disorders. IU Health Employee Health Plan will begin using the findings of the National Standards Project to cover services for members with Autism Spectrum Disorders beginning January 1, 2012. We would like to inform you that ______ services received in 2011, including her regular Health and Behavior Assessments, will continue to be covered in 2012.

The National Autism Center (NAC) through the National Standards Project chose to build consensus among experts on the treatment of Autism Spectrum Disorders with the goal of providing evidence-based practice guidelines. Through this project, four treatment categories have been created. These include Established Treatments, Emerging Treatments, Unestablished Treatments and Ineffective/Harmful Treatments. The guidelines can be found on the National Autism Center (NAC) website http://www.nationalautismcenter.org/affiliates/.

The Established Treatments will be covered benefits. Established Treatments are defined by the National Standards Project as treatments for which scientific evidence (several well-controlled studies) has shown the intervention produces beneficial effects although universal improvements cannot be expected to occur for all individuals. The Established Treatments include:

Antecedent Package

- Applied Behavioral Analysis (ABA)
- Behavioral Psychology
- Positive Behavioral Supports

Behavioral Package

- Applied Behavioral Analysis (ABA)
- Behavioral Psychology
- Positive Behavioral Supports

Comprehensive Behavioral Treatment for Young Children (under the age of 8)

- Applied Behavioral Analysis Programs
- Behavioral Inclusive Programs
- Early Intensive Behavioral Intervention

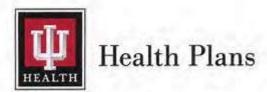

Joint Attention Intervention

Individual is taught to respond to the nonverbal social bids of others and/or initiate joint attention interactions

Modeling

Targeted behavior is modeled (live or video)

IU Health Plans 1776 N. Meridian St., Suite 300 Indianapolis, IN 46202

Naturalistic Teaching Strategies

- Focused Stimulation
- · Incidental Teaching
- Milieu Teaching
- Embedded Teaching
- Responsive Education
- · Prelinguistic Milieu Teaching

Peer Training Package

- Peer Networks
- Circle of Friends
- Buddy Skills Package
- Integrated Play Groups
- · Peer Initiation Training
- Peer-mediated Social Interactions

Pivotal Response Treatment (PRT)

Pivotal Response Training or Teaching

× medowar, RX

Natural Language Paradigm

Schedules

 Presentation of a task list that communicates a series of steps required to complete a specific activity often with reinforcement

Self-management

· Individuals are taught to independently regulate their behavior through checklists, visual prompts, and tokens

Story-based Intervention Package

 Written descriptions of situations (Social Stories) are provided under which specific behaviors are expected to occur

If you have additional questions regarding this information please contact me at IU Health Plan Medical Management at 317.963.9853.

Sincerely,

Medical Management

IU Health Plans 1776 N. Meridian St., Suite 300 Indianapolis, IN 46202 From: "Zanzinger, Catherine V."

Subject: Benefit Description for Autism Spectrum Disorders

Below is a description of the Autism benefit for Yahoo families. Please visit our website at Magellanhealth.com, and see the Autism Speaks link for information on ABA treatment. I can be reached at 800/424.1565, ext 77144, if you have any questions. If you are interested, we can assist you in finding the appropriate provider.

Benefit Consideration for Autism Related Diagnoses

Any enrolled member who meets the covered diagnoses of Autism Spectrum Disorder Diagnoses (Autistic Disorder, Asperger's Syndrome and Pervasive Development Disorder NOS) as well as Childhood Disintegrative Disorder, who belong to the Aetna plans, is eligible for treatment, provided the treatment is preauthorized by Magellan at 800-424-1787.

Note: The Aetna medical plans will cover Speech Therapy, Occupational Therapy and Physical Therapy as it relates to one of the above diagnoses for up to 60-visits per year, combined, up to age 7 (i.e., through age 6).

Behavioral health autism benefit expenses will be covered at 80% of Usual, Customary and Reasonable (UCR) charges or contracted rates where available, up to \$25,000 per year, with a lifetime maximum of \$75,000. These expenses will not count toward satisfying your annual out-of-pocket maximum.

Note: Authorized traditional outpatient and inpatient Behavioral Health services (including medication management) provided by licensed behavioral health professionals for conditions associated with autism will continue to be paid at the existing Managed Behavioral Health rates per the Yahoo! benefit plan, will not count against the \$25,000 annual or \$75,000 lifetime maximum, but will count towards your annual deductibles and out of pocket maximums.

BH Treatment of Autism may be provided by:

- Providers who meet established qualifications, such as "certified" ABA providers.
- Providers who perform services in consultation with or under the supervision of a "certified" provider.
- Clinically licensed professionals such as clinical social workers, clinical psychologists, other masters level therapists, physical, occupational or speech therapists.

The benefit does not include tuition for school-based programs, equipment or services provided by non-eligible providers.

^{*}Magellan Subsidiaries in California are Human Affairs International of California and Magellan Health Services of California, Inc. - Employer Services

- Not provided solely for comfort or convenience;
- For the condition it is ordered:
- Utilized in the proper quantity, frequency and duration for the treatment of the conditions for which they are ordered; and
- Not redundant when combined with other treatment being rendered to the covered person.

Eligible Expenses from A Through Z

All of the medical plans cover a range of medical services and supplies, subject to the plan's deductibles, coinsurance, exclusions and limits, as listed under the "Your Medical Plan Benefits Chart." Covered services and supplies include the following:

Acupuncture — covered based on medical necessity and clinical guidelines

Allergy injections/serum

Ambulance services — charges for a licensed ambulance provider to take you to the nearest hospital where needed medical care and treatment can be provided

Anesthetics and their administration

Autism-related disorder therapy and treatment — applied behavioral analysis, psychiatric care and psychological care related to the treatment of autism spectrum disorders (including autism, Asperger's disorder, pervasive developmental disorder not otherwise specified, Rett's disorder and childhood disintegrative disorder) for dependent children up to age 19

Blood transfusions and blood not donated or replaced

Breast reconstruction and breast prostheses — federal law requires health plans that provide mastectomy benefits to also provide coverage for certain kinds of reconstructive surgery following a mastectomy. If you or a covered dependent is receiving benefits under the medical plan in connection with a mastectomy and you elect breast reconstruction in consultation with the attending physician, coverage will be provided for:

- All stages of reconstruction of the breast on which the mastectomy was performed;
- Surgery and reconstruction of the other breast to produce a symmetrical appearance; and
- Prostheses and treatment of physical complications at all stages of the mastectomy, including lymphedemas.

Breast reduction (reduction mammoplasty)

- Charges made for reduction mammoplasty for symptomatic macromastia as medically necessary; and
- Charges made for surgical treatment of gynecomastia as medically necessary.

Autism Resources for Technology Company

Autism Condition Specific Team

Cigna has established an autism care management team. The Cigna autism team is comprised of full-time licensed mental health professionals who have all received training in autism spectrum disorders (ASD). When an individual, family member, or provider contacts Cigna for assistance related to ASD, they are assigned to an autism care manager who will assist the family by providing ongoing case management, and by addressing all questions and concerns related to autism benefits, treatments and community supports.

The autism team at Cigna provides the following services to customers who have a family member with an autism spectrum disorder:

- © Find resources and offer referrals in the member's area
- © Search for health professionals within our autism health professional network
- © Provide helpful information about treatment options
- 1 Help the member learn about and make the most of their behavioral benefit plan
- Help coordinate and integrate care between behavioral and medical benefits

How to obtain an Autism Care Manager

- Call 1-800-274-7603
- At the prompt press "2" (member)
- When you speak to a Personal Health Team Member, provide them with your ID information and request to speak to an "Autism Care Manager"
- At this time a message will be sent to the Autism Team. They will research your benefits/request and return your call in 24-48 hours during routine business hours (Monday-Friday, 8:00-5:00 CST)

Autism Awareness Series and Resources

Cigna offers a free education awareness series designed to provide parents, family members and caregivers with information on the physical, mental, and emotional issues common in children who are experiencing an autism spectrum disorder. The information in this series is designed to educate parents on strategies for dealing with the day to day challenges they may experience. For more information on the autism awareness series schedule, visit www.cignabehavioral.com.

Autism Awareness Page

Find additional autism information and resources by visiting www.cignabehavioral.com and clicking the "more autism information and resources" link at the bottom of the page under the autism awareness- a Cigna Education Series page.

Symantec Benefits for Autism

<u>Applied Behavioral Analysis Therapy (ABA)</u>- effective 1/1/2012 Mental Health outpatient benefits include coverage of Applied Behavioral Analysis related to the treatment of autism spectrum disorders (including Autistic Disorder, Asperger's disorder, Pervasive Developmental Disorder not otherwise specified, Rett's Disorder and Childhood Disintegrative Disorder). Unlimited visits per plan year.

- CIGNA Choicefund HRA Plan/Utah Choicefund PPO Plan- Plan pays 90% in network; Plan pays 70% out of network; unlimited visits per plan year
- CIGNA Open Access Plus/Utah PPO- Plan pays 85%; Plan pays 60%; unlimited visits per plan year

CIGNA Autism Care Management Team will be the gate keepers to the ABA treatment. Prior authorization would be required to obtain benefit.

Short Term Rehabilitation benefits

Speech, physical, and occupational therapy are covered for autism spectrum disorders. Benefits are limited to 60 days per plan year and are covered under your medical benefits for the diagnosis of autism.

Note: speech therapy for both developmental delay and autism are covered regardless of medical necessity. (Developmental delay is not covered for physical or occupational therapy)

(The definition of autism as a medical condition is as follows: autism spectrum disorders are neurological disorders, usually appearing in the first three years of life that affect normal brain functions and are typically manifested by impairments in communication and social interaction, as well as restrictive, repetitive and stereotyped behaviors.)

Please refer to the SPD for specific benefit information.

Health Services include Autism Spectrum Disorder services that are focused on educational/behavioral intervention that are rehabilitative in nature and that are backed by credible research demonstrating that the services or supplies have a measurable and beneficial health outcome. Benefits are provided for intensive behavioral therapies (educational/behavioral services that are focused on primarily building skills and capabilities in communication, social interaction and learning such as Applied Behavioral Analysis (ABA)).

Autism Spectrum Disorder services must be authorized and overseen by the Mental Health/Substance Use Disorder Administrator. Contact the Mental Health/Substance Use Disorder Administrator regarding Benefits for Neurobiological Disorders - Mental Health Services for Autism Spectrum Disorders.

Under UnitedHealthcare, the autism benefit program is provided to all employees or dependents with the following primary diagnoses:

- Autistic Disorder
- Childhood Disintegrative Disorder
- Asperger's Disorder
- Rett's Disorder and
- Pervasive Development Disorder not Otherwise Specified/Atypical Autism
- Pervasive Developmental Disorder

Benefits will be provided as a part of the Behavioral Health Benefit Plan at: 80% of eligible expenses and are limited to a \$20,000 calendar year maximum and a \$40,000 lifetime maximum, combined Network and Non-Network.

This does not apply to the plan's out-of-pocket maximum.

Eligible participants are through the age of 18 years old.

A typical treatment plan may include the following services with an eligible provider of service:

- Physical therapy
- Occupational therapy
- Speech therapy
- Music therapy
- Skills training (e.g., activities of daily living, social, coping)
- Behavioral therapy (e.g., family, group, individual)
- Consultative services (e.g., schools, agencies, community services)

(Physical, speech and occupational therapy fall under medical plan.)

Each case will be reviewed, diagnosis validated and treatment plan evaluated for appropriateness. Level of care standards shall be applied.

Exclusions:

Coverage for the autism benefit excludes

- Tuition for school based programs for autism and autism spectrum disorders,
- Any related supplies or equipment associated with the treatment of autism, and any services provided by non-eligible providers.
- Dolphin therapy
- Nutritional supplements
- ECT
- Cleansing Therapies

Eligible providers include:

- Providers who have met established qualifications such as a "certified" ABA provider,
- Providers who perform services in consultation with "certified" providers (e.g., therapy assistants),
- Clinically licensed professionals, such as select Doctorate and Master's prepared providers, trained to treat autism and autism spectrum disorders.

In the event a "certified" provider is not available, services may be rendered by a noncertified provider under the supervision of a "certified" provider.

AUTISM ENTERS INTO THE EQUATION

One in 110 babies is born with autism, according to the CDC, and now more employees are seeking coverage.

hen Michael Kulstad's son Cameron was diagnosed with autism at age 4, Kulstad knew he faced years of expensive medical treatment. At the time, he worked for the federal government, which covered unlimited occupational therapy visits for Cameron.

Unfortunately, his next employer, an international law firm, didn't provide such comprehensive coverage. Kulstad struggled to coordinate care for his son and manage the red tape involved in getting just part of Cameron's therapy covered. "There's so much paperwork that they throw at you that it's frustrating. You don't know what's covered and what's not," says Kulstad, whose son, now 9 years old, is mainstreamed in school but is pulled out of class for therapy.

Kulstad eventually left that firm to become senior manager for media relations at McGuireWoods, a law firm in Washington, D.C., that annually solicits employee proposals on ways to improve benefits.

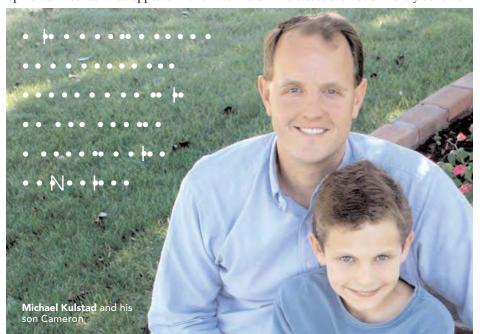

In his pitch to add autism benefits, Kulstad compiled the latest research data on the disorder and described care for Cameron. The statistics helped make Kulstad's case, says Christina Smith, chief human resources officer for McGuireWoods. The Autism Society of America says autism is the fastest-growing developmental disorder in the United States, and the latest figures from the U.S. Centers for Disease Control and Prevention show one in 110 babies born in the U.S. have the disorder. It is even more common for boys, at a rate of one in 70 births.

"We were pleased to be educated by Mike in terms of the need for this enhancement," Smith says. Last January, McGuire-Woods expanded its autism benefits package, including coverage for the speech, occupational and counseling therapies that Cameron needs.

Unlike other chronic medical conditions diagnosed in childhood, autism is sometimes mislabeled as a learning disability and doesn't qualify for coverage under some insurance plans. The National Institutes of Health defines autism as "a developmental disorder that appears in the first

roots organization, drafted proposed legislation urging states to make autism benefits mandatory for insurance plans governed under the Employee Retirement Income Security Act of 1974, commonly known as ERISA. Autism Speaks, another advocacy group, proposed similar legislation, and the two organizations are working together at the state level.

Since then, 23 states have mandated autism coverage with such initiatives currently making their way through 22 other state legislatures and the District of Columbia. Five states are not currently consider-

three years of life and affects the brain's normal development of social and communication skills."

Depending on the severity of the disorder, treatments could include medication and various forms of therapy, including occupational, physical, speech-language, vision and sensory integration, a term that refers to the way the nervous system receives messages from the senses and turns them into appropriate motor and behavioral responses. Because autism is a highly individualized disorder, medical care is tailored to each case.

In 2009, the Autism Society, a grass-

ing introducing such bills.

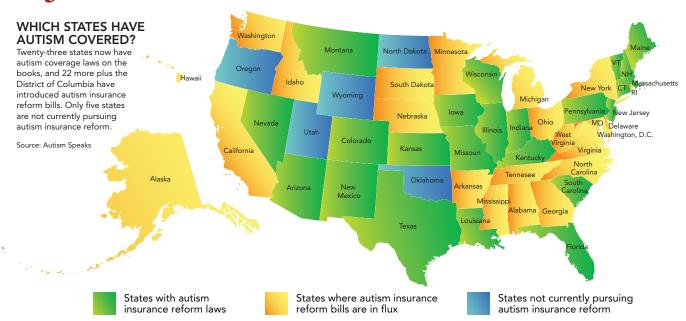

But state mandates aren't a panacea for parents of autistic children. The laws can't require companies with self-funded insurance plans, such as McGuireWoods, to offer autism coverage. ERISA exempts such plans—in which employers directly assume most of or the entire cost of health insurance for their employees—from compliance with state insurance laws. Fifty-nine percent of all covered workers are now in self-funded insurance plans, according to the Kaiser Family Foundation *Employer Health Benefits* survey for 2010.

Few large companies with self-funded

rew large companies with sen-funde

Outfront

Note: In October, New York Gov. David Paterson vetoed the state's autism treatment insurance bill. The governor said he'd sign the bill if the Legislature designated a source of funding to cover the estimated \$70 million in state and municipal costs.

plans currently offer autism insurance benefits. Autism Speaks lists 22 on its website that do cover autism, including DTE Energy Co., a Detroit-based gas and electric utility services company, and technology companies such as Cisco Systems Inc., Microsoft Corp. and Yahoo Inc. "The failure to require health insurance coverage for workers with autistic children will continue to take its toll on businesses and lead to a loss of productivity," said Anthony Earley Jr., the current executive chairman and then-CEO of DTE Energy, at a hearing in June on autism's effects on the state of Michigan. This past summer, DTE announced that it would offer autism benefits to its 10,000 workers, with full implementation expected by January 2011.

The state legislation is sparking greater awareness and interest in autism benefits. "A few companies have asked us for our thoughts and opinions because they are finding out they have a hell of a lot of parents with kids with autism," says Jeff Sell, vice president of public policy for the Autism Society.

Douglas Nemecek, the national medical director of behavioral health for Cigna Corp., the Philadelphia-based insurance company, also receives more inquiries from companies about autism benefits. Some employers "recognize the significant impact the autism spectrum disorder is having on the employees and their family," he says. "On the other side, they are balancing that with concerns for

the cost of these treatments, especially with the cost associated with the intensive Applied Behavior Analysis treatment," which is individualized behavior-based therapy. The Council for Affordable Health Insurance in Alexandria, Virginia, reports that adding autism coverage increases the cost of insurance by about1 percent.

Autism treatment can indeed be expensive. "It can cost up to \$72,000 per year for various therapies and other treatments associated with early intervention," says Sell of the Autism Society, himself the father of two teenage boys with autism. For example, the American Academy of Pediatrics and the U.S. Surgeon General's Office recommend Applied Behavior Analysis an an early intervention, which can cost more than \$20,000 annually. The direct and indirect costs of caring for an individual with autism total an estimated \$3.2 million over the person's lifetime, according to a 2006 study by the Harvard School of Public Health.

Cisco Systems monitors its health care costs and has seen a small increase because of its autism benefits, says Lisa Jing, program manager for behavioral health at Cisco who helped develop the autism benefit. But of greater concern are the indirect costs of lost worker productivity, she adds. "When we look at the total costs, we feel it's been a very, very worthwhile investment."

Like the law firm McGuireWoods, Cisco Systems began offering autism

benefits at the request of employees with autistic children. When it added the benefits in 2007, it capped annual coverage at \$30,000 and lifetime benefits at \$90,000.

Some 40 employees have taken advantage of Cisco's autism benefits so far. In light of mental health parity laws mandated by the federal government this year, Cisco no longer has an annual or lifetime benefit maximum for autism treatments. In addition, any family member on Cisco's health plan who is diagnosed with autism, not just children, is eligible for the benefits.

Cisco and other companies see autism benefits as a recruiting tool. "Autism strikes all socio-economic levels, all ethnicities," Jing says. "So, it is directly related" to being competitive in benefits.

Smith, from McGuireWoods, also hopes to use the benefit for future recruitment efforts. "We look forward to the opportunity to talk to new recruits about this enhanced benefits offering."

For now, the law firm's autism benefits have played a role in retaining at least one employee. "I told somebody once: It's pretty hard to knock your employer when they do something like this for you. I'm grateful to work here," Kulstad says. "When I left my previous place of employment, the struggles in having to get Cameron's care covered were a factor in me leaving. I don't think about that here."

-Rita Colorito

FACTSheet

April 2010

Autism: Facts for Employers

Over the last several decades, the number of autism diagnoses has increased sharply. This fact sheet provides an overview of autism and its treatment, as well as strategies employers can use to assist employees who are caring for a family member with autism.

How common is autism?

According to the Centers for Disease Control and Prevention, approximately 1 in every 110 children in the United States has autism (almost 1%)¹ and tens of millions worldwide are affected. This estimate makes autism more common than childhood cancer, juvenile diabetes and pediatric AIDS combined. Research shows that boys are more likely than girls to develop autism, and are diagnosed three to four times as often. An estimated one of every 70 boys in the United States is diagnosed with autism.²

While the rate of autism diagnosis has increased dramatically in recent years (diagnoses increased 556% between 1991 and 1997;^{3,4} research showed a more modest increase of 57% between 2002 and 2006¹), it may be that not all of the increase in diagnoses reflects an actual rise in the number of children with autism. Other possible explanations may be greater public awareness of the disorder⁵ and the recent introduction of the term "autism spectrum disorders" to include a broad range of clinical characteristics.⁶

What is autism?

Autism is one of the three "autism spectrum disorders" (ASDs), a group of disorders that also includes Asperger syndrome and pervasive developmental disorder not otherwise specified (PDD-NOS). These developmental disorders are characterized by problems with socialization, communication, and behavior.⁷ Of the three, autism is typically the most severe disorder.⁸

The symptoms of autism vary widely, but the disorder's trademark feature is impaired social interaction. People with the most serious cases have a complete inability to communicate or interact with others. Some signs of autism may include: 10

- Poor eye contact
- Failure to respond to one's name
- Speech with an abnormal tone or rhythm (e.g. singsong or robot-like)
- Repetitive movements, such as rocking, spinning, or hand-flapping
- An insistence on specific routines or rituals
- Sensitivity to light, sound, touch and other stimuli.

How is autism diagnosed?

Autism usually begins before age three and lasts throughout a person's life, although the symptoms may become milder over time. The disorder is sometimes diagnosed in children as young as 18 months, but other children are not diagnosed until they are much older. It is difficult to diagnose autism because there is no medical test available—it is diagnosed based only on an individual's behaviors, and these can differ greatly between any two people with autism.⁷

What causes autism?

Scientists do not yet know for sure what causes autism. There are likely many causes. Current possibilities include:10

- Genetic errors
- Environmental factors (e.g., viruses, certain chemicals like PCBs¹¹)
- Problems during labor and delivery

This fact sheet was developed by the National Business Group on Health, which should be cited accordingly. Copyright 2010 National Business Group on Health,

- Damage to the amygdala (the portion of the brain that detects danger)
- Increased paternal age
- Other medical conditions (children with fragile X syndrome, tuberous sclerosis, Tourette syndrome, and epilepsy are at higher risk of having autism)

Is autism caused by vaccines?

With the increased prevalence of autism in the 1990s, some people believed that vaccinations were responsible. This belief likely stems from the fact that children show autism symptoms around the same age that they receive the measles, mumps, and rubella (MMR) vaccine, which used to contain a form of mercury called thimerosol. However, autism diagnosis rates have actually risen since thimerosol was removed from childhood vaccines in 2001, and recently, several research studies have disproved the idea that autism is linked to vaccinations. Unfortunately, despite scientific evidence to the contrary, approximately one out of every four parents continues to believe that vaccines cause autism in otherwise healthy children.

How is autism treated?

There is no cure for autism, but early intervention services (prior to age 3) may help.⁷ Even after this age, possible therapies include:

- **Educational/behavioral:** Therapists use highly structured sessions to help children develop social and language skills. Specific examples include Applied Behavior Analysis (ABA) and Treatment and Education of Autistic and Related Communication Handicapped Children (TEACCH).
- Medications: Doctors may prescribe medications for autism-related symptoms (e.g., anxiety, depression, attention-deficit hyperactivity disorder, epilepsy or obsessive- compulsive disorders). Antipsychotic medications may also be prescribed for children who have severe behavior problems.⁹
- Other therapies: Speech, occupational and physical therapy may be helpful for children with autism. Speech therapy can help a child develop language and social skills, while occupational and physical therapy can help improve coordination and motor skills. ¹⁵ Family interventions, including parent training, are also recommended. ¹⁶

Experts recommend that children with autism begin intervention services as soon as autism is strongly suspected. Children should receive at least 25 hours per week of intensive interventions that include systematically planned, developmentally appropriate educational activities.¹⁶

How might autism affect my employees?

Families of children with autism experience a number of challenges in trying to meet the needs of their children. Some of these include:¹⁷

- **Difficulty getting a diagnosis:** Parents often suspect that their child's behavior is atypical long before they actually get a medical diagnosis. A recent study showed that the mean age of the first evaluation of children with autism spectrum disorders was 48 months, but the mean age of diagnosis was 61 months. Early diagnosis is important because early intervention services have shown to be beneficial, particularly when started before age three. ¹⁹
- **Getting appropriate intervention services:** For best results, it is recommended that children with autism receive intensive educational programming for at least 25 hours a week. Therefore, parents must sort through a multitude of information about available treatment and services. Adding to this difficulty is a lack of providers with autism expertise in many parts of the country.
- Coordinating care: The system of care for individuals with autism spectrum disorders is fragmented. Services are delivered in many different settings, including schools, residential treatment programs and traditional health care settings.²⁰ Research shows that parents of children with autism use an average of six separate services over a six-month period, have an average of eight different providers involved in their child's care and spend approximately 27 hours in interventions each week. With these extreme time demands, it is not easy for parents to ensure that collaboration and communication is taking place among service providers.²¹

Studies show that parents of children with special needs have higher rates of anxiety and depression than parents whose children are without special needs. Rates of anxiety and depression are actually highest in parents of children with autism.²² Also, mothers of children with autism are much more likely than other mothers to report being highly stressed and having poor or fair mental health.²³ This is especially important because research shows that high levels of parental stress can counteract the effectiveness of a child's autism interventions.²⁴

How does autism affect my business and health care costs?

The societal costs of autism are staggering: Caring for and treating a person with the disorder costs more than \$3 million over a lifetime.²⁵ In terms of employer costs, research shows that children with autism spectrum disorders have higher rates of usage of health care services and higher health care costs than other children. In one recent study, children with autism spectrum disorders had twice the mean number of clinic visits as other children (5.6 versus 2.8 visits per year). Other costs

This fact sheet was developed by the National Business Group on Health, which should be cited accordingly. Copyright 2010 National Business Group on Health.

were also higher, including the mean cost of hospitalization (\$550 versus \$208 per year), clinic visits (\$1373 versus \$540 per year), and prescription medications (\$724 versus \$96 per year). Other research shows that people with autism have average medical expenditures that exceed those without autism by anywhere from \$4,110 to \$6,200 per year. ²⁷

Lost productivity for parents who care for children with autism is another issue. In fact, providing care for any ill dependent is associated not only with increased absenteeism and work limitations for an employee, but an increase in his/her number of health risks as well.²⁸ Work disruptions caused by caregiving responsibilities result in productivity losses of \$1,142 per employee per year. The demands of caring for a child with autism may even force a parent to leave the work force.²⁹

What about insurance coverage?

Caring for a child with autism entails a very heavy financial responsibility. Many autism treatments are excluded from health insurance coverage; the extent of insurance coverage for autism treatments is a highly debated issue. Opponents of including autism treatment in health benefits argue that autism is an educational issue more than a medical one, that children with autism are best served in the school system, and that insurance coverage of autism treatments will result in higher premiums for everyone.³⁰ However, based on current prevalence rates and expenditures, premiums would likely only increase by about 1% if autism treatments were covered under insurance plans.³¹

Despite the concerns, many states have legislated mandatory insurance coverage for children with autism. During the 2007-2008 legislative session, Arizona, Florida, Illinois, Louisiana, Pennsylvania, South Carolina and Texas enacted such legislation. In 2009, Colorado, Connecticut, Montana, Nevada, New Jersey, New Mexico, and Wisconsin followed suit. Other states require limited coverage for autism under mental health insurance laws.³²

Children with disabilities, including autism, do receive certain educational services at no cost through the Individuals with Disabilities Education Act (IDEA). Depending on the child's needs, services may include transportation, counseling, recreation and enrichment programs, school nurse services, and physical, occupational and speech therapy.³³ However, educational services alone are not adequate to meet the needs of a child with autism.

What can I do for my employees?

- Make employees aware of resources that are available through the state, school system and community (for local resources, see: www.autismspeaks.org/community/resources/index.php). Many services are available at no cost through the IDEA legislation. The number of autism diagnoses is growing faster than the number of available treatment providers, so it may be difficult for your employees to locate the services they need.
- Educate parents about the importance of early intervention for autism. For example, let parents know that they should seek medical advice if their child:¹⁰
 - Doesn't babble or coo by 12 months.
 - Doesn't gesture by 12 months.
 - Doesn't say single words by 16 months.
 - Doesn't say two-word phrases by 24 months.
 - Loses previously acquired social or language skills at any age.
- Use your employee assistance program (EAP) to assist employees who are caring for those with autism. The EAP can help caregivers locate the resources they need in the community as well as provide support for caregivers themselves.
- Promote and/or support the medical home. Medical homes, while useful for all children, can
 be especially beneficial for children with special health care needs and their parents. Parents of
 children with special health care needs report significantly less delayed or foregone heath care
 when their children have a medical home.³⁴ For more information, see:
 http://www.businessgrouphealth.org/pdfs/Medical%20home%20proof%20FINAL.pdf.
- Encourage pediatric well-child visits. Pediatricians play an important role in recognizing autism spectrum disorders because they are typically the first medical point of contact for parents. Also work with your health plan to ensure that providers are screening for developmental disorders during these well-child visits.
- Facilitate parent support or affinity groups and community involvement. Other parents and local not-for-profit organizations can be major sources of support for caregivers.
- Talk to your health plans about potential solutions for insurance issues, including making sure that evidence-based treatment options are covered and that there is an adequate number of providers. See below for an example of how a large employer, Cisco Systems, Inc., partnered with its health plans to develop a benefit specifically for autism treatment.

This fact sheet was developed by the National Business Group on Health, which should be cited accordingly. Copyright 2010 National Business Group on Health.

Autism coverage at Cisco Systems, Inc.

In 2007, based on recommendations from employees, Cisco Systems, Inc. developed a health plan benefit specifically for autism treatment. In close partnership with its health plans and consultants, the company adopted coverage for two evidence-based treatments, Applied Behavioral Analysis (ABA) and Relationship Development Intervention (RDI). These specific treatments were chosen for their strong track records of improving the lives of children and also easing some of the challenges for families. The first version of the benefit included a \$30,000/year and \$90,000/lifetime maximum, but these limits have been removed for 2010 due to mental health parity laws.

Hearing parent concerns about needing help not only in paying for care but also in navigating the entire claims process, Cisco also worked with its health plans to designate a key contact within each plan that would specifically focus on autism claims from Cisco employees. The key contact ensures that appropriate care is being given and that claims are being processed appropriately and in a timely fashion, which eliminates much of the administrative burden on parents and family members. They also facilitate communication between the behavioral and medical parts of the health plan.

Cisco's autism benefit went into effect on January 1, 2007, and since then the company has had many follow-up conversations with the original group of parent employees who were involved in developing the benefit. The conversations bring together representatives from Cisco, health plan medical directors, and benefit consultants, with a goal of fine-tuning the benefit and related processes based on feedback from parents. According to representatives from Cisco, parents have been extremely appreciative of the benefit and have used the services quite responsibly.

Recommendations based on Cisco's experience include:

- 1) Talk to your employees. Hear their stories and let them know the company cares—and not just about employee productivity or costs. While those concerns are part of the equation, it is most important to create an environment where employees can contribute their skills without being distracted and worried about their families. Be open to designing new plan provisions to cover unmet needs based both on claims data and employee input.
- 2) **Keep the dialogue open.** Cisco's management was willing to hear parent complaints and take responsibility for the problem. When a problem wasn't solved effectively, they worked with the parents to solve it together.
- 3) Work with your health plans. Sit down with your health plan administrators and get to know the medical directors on both the medical and behavioral health sides. Challenge them to remain current on medical literature and research, and if possible, make them available and accessible for parent questions during periodic scheduled meetings.
- 4) **Hold the health plans accountable.** Health plans need to be proactive in building a network of preferred providers. Cisco's health plans are responsible for identifying Centers of Excellence and actively recruiting them to participate in provider panels. It is also important that the health plans help providers organize appropriate certification, licensure, and supervision where appropriate. Many times, providers are certified in an autism treatment but not licensed, so it is important that they be supervised by a licensed mental health practitioner.

About the Center for Prevention and Health Services

Mission:

• Educate large employers about diseases and health issues in order to protect and promote health and well-being among their employees and beneficiaries as well as control costs.

The Center:

- Identifies strategies and develops tools to address health and benefits issues.
- Translates health research into practical solutions for large employers.
- Provides the national voice for large employers and links them with national expertise and resources.

About the National Business Group on Health

The Business Group is the only non-profit organization devoted exclusively to representing large employers' perspectives on national health issues and providing solutions to its members' most important health care and health benefits challenges. The Business Group fosters the development of a safe health care delivery system and treatments based on scientific evidence. Members share strategies for controlling costs, improving patient safety and quality of care, increasing productivity and supporting healthy lifestyles.

By fax: (952) 883-5380, original to follow by mail.

Dear Ms. Zimmerman:

Attached is a copy of recent correspondence I have received from my constituent, Ms. regarding HealthPartners decision to stop providing benefits for Intensive Early Intervention Behavior Therapy Services (IEIBTS) effective January 1, 2004.

Autism is the most pervasive developmental disorder, with a prevalence of 10 to 12 children per 10,000, according to the Report of the Surgeon General (copy enclosed). Furthermore, according to the enclosed clinic studies of IEIBTS, intensive, sustained special education programs and behavior therapy early in life is the only proven therapy for the treatment of autism.

I would also like to draw your attention to HealthPartner's *Promising Therapies Approach* and quote from your website:

"When a new medical procedure or treatment comes on the scene, it can take years before formal research findings are published and the therapy is accepted as proven care instead of experimental care...But at HealthPartners, we think you should receive coverage for treatments that have shown the most promise, even before all the studies are final."

Your website then proceeds to list the standards for determining when a new, experimental treatment should be considered a promising therapy. These standards include:

- 1. Reliable evidence preliminarily suggests a high likelihood that the patient will have improved outcomes compared to standard treatment.
- 2. Reliable evidence suggests conclusively that beneficial effects outweigh any harmful effects.

WASHINGTON OFFICE; 346 RUSSEL SENATE OFFICE BUILDING WASHINGTON, DC 20510 (202) 224-3244 FAX: (202) 228-2186 REGIONAL OFFICES: 401 DEMERS AVENUE EAST GRAND FORKS, MINNESOTA 56721 (218) 773-1110 FAX: (218) 773-1993

222 Main Street, Suite 200 Post Office Box 937 Brwasik, Minnesota 55708 (218) 865-4480 Fax: (218) 865-4667 Post Office Box 608 Renville, Minnesota 56284 (329) 805-3007 Ms. Donna Zimmerman October 10, 2003 Page 2

It seems to me that HealthPartners' mission "to improve the health of our members, our patients and the community" and the *Promising Therapies* program would lead you to believe that IEIBTS is a positive programs for your members with autism and, thus, deserves to maintain the present level of coverage.

psychologist Karen Hampton has recommended the therapy for the analysis. This type of intensive, sustained therapy early in life is the only extensively researched validated form of treatment of autism. I would ask you to thoroughly review the enclosed letters from and the research in support of IEIBTS. The has benefitted greatly thus far from IEIBTS and HealthPartners' coverage of the needed continued therapy would allow him to obtain his full rehabilitative potential.

I am forwarding this material for your consideration and response. Marye Knudson, a member of my Fort Snelling staff, may be contacting you as well to discuss this concern. If you have any questions, or need additional information in order to properly investigate this matter, you may contact Marye at (612) 727-5220.

Please direct your final response to Marye Knudson at my Fort Snelling office.

Your assistance is greatly appreciated.

My best regards.

Sincerely,

Mark Dayton

United States Senator
